1 General information 3
1.1 Validity 3
1.2 Liability 3
1.3 Product conformity 3
1.4 Data privacy 3
1.5 Presentation of information 3

2 Safety 4
2.1 Intended use 4
2.2 General safety instructions 4
2.3 Safety information for installation 4
2.3.1 Safety instructions – cooktop extractor installation 5
2.3.2 Safety information for cooktop installation 5
2.4 Safety instructions – repairs, servicing and spare parts 6
2.5 Safety instructions – disassembly and disposal 6

3 Technical data 7
3.1 Cooktop extractor PKA3/PKA3AB 7
3.2 Cooktop extractor system with integrated fan PKAS3/PKAS3AB 7
3.3 Surface induction cooktop PKFI3/PKFI3R 8
3.4 Induction cooktop PKI3 9
3.5 Induction wok cooktop PKIW3 9
3.6 HiLight cooktop, 3-ring/2-ring PKC3 10
3.7 HiLight cooktop, 3-ring/roaster PKCB3 10
3.8 Hyper cooktop, 1-ring/2-ring PKCH3 11
3.9 Tepan stainless steel grill PKT3 12
3.10 Gas cooktop PKG3 13
3.11 Control knob 13

4 Installation 14
4.1 General installation instructions 14
4.1.1 Operating the cooktop extractor in the exhaust air mode and where there is a fireplace dependent upon the air supply in the room 14
4.2 Checking the scope of delivery 15
4.2.1 Scope of delivery of the cooktop extractor 15
4.2.2 Scope of delivery of the cooktops 15
4.3 Tools and aids 15
4.4 Assembly instructions 15
4.4.1 Installation clearances 15
4.4.2 Minimum installation dimensions 16
4.4.3 Worktop 16
4.4.4 Kitchen units 16
4.4.5 Special assembly instructions for the gas cooktop 16
4.4.6 Return flow of recirculated air 17
4.5 Cut-out dimensions 17
4.5.1 Worktop overhang 17
4.5.2 Flush installation 18
4.5.3 Surface mounting 18
4.6 Control knob installation 19
4.6.1 Cooktop extractor bore holes 19
4.6.2 Cooktop bore holes 19
4.6.3 Example bore holes 19
4.6.4 Fitting the control knob 20
4.7 Planning variations for PKA3/PKA3AB 20
4.7.1 Airflow straight to the side 20
4.7.2 Airflow towards the left 21
4.7.3 Rotating the cover frame by 180° 21
4.8 Installing the cooktop extractor 22
4.8.1 Fitting the cooktop extractor 22
4.8.2 Securing the cooktop extractor 22
4.9 Installing the duct system 23
4.9.1 Duct connection dimensions 24
4.9.2 Preparing for installation 24
4.9.3 Connecting the duct system to the appliance 24
4.9.4 Standard set-up for PKA3/PKA3AB 24
4.9.5 Positioning the control unit 25
4.9.6 Installing the additional fan 25
4.10 Gas installation 25
4.10.1 Ventilation 25
4.10.2 Gas connection 25
4.10.3 Connecting the gas supply 26
4.10.4 Additional installation instructions for Australia and New Zealand (AU/NZ) 26
4.10.5 Changing the gas type 26
4.11 Installing the cooktops 29
4.11.1 Preparing the cooktop extractor when using the wok cooktop 29
4.11.2 Installing the cooktop 29
4.11.3 Installing the Tepan stainless steel grill 30
4.11.4 Cooktop installation rotated by 180° 30
4.12 Connecting external switch contacts 31
4.12.1 Preparing PKAS3/PKAS3AB 31
4.12.2 Preparing the control unit on PKA3/PKA3AB 31
4.12.3 Preparing connection cables for external switching equipment 32
4.12.4 Installing the external switch device 32
4.13 Establishing communication and power connection 34
4.13.1 Connecting the control knobs 34
4.13.2 Ports on cooktop extractor system PKAS3 37
4.13.3 Connecting cooktop extractor PKA3 37
4.13.4 Establishing contact between the cooktop extractor and cooktops 37
4.13.5 Connecting the power supply 38
4.14 Basic configuration 39
4.14.1 Gas configuration 39
4.15 Initial operation 39
4.15.1 Using the gas cooktop for the first time 40
4.16 Sealing the appliances 40
4.17 Handover to user 40

5 Decommissioning, disassembly and disposal 41
5.1 Decommissioning 41
5.2 Disassembly 41
5.3 Environmentally-friendly disposal 41
5.3.1 Disposal of transport packaging 41
5.3.2 Disposal of accessories 41
5.3.3 Disposal of the old appliance 41

1 General information

These instructions and all accompanying documents contain important information to protect you from injury and prevent damage to the appliance.

▶ Please by all means adhere to all documents that form part of the scope of delivery.

Assembly, installation and commissioning must always occur in line with national laws, regulations and standards. The work must be performed by qualified specialists who know and comply with the additional regulations of the local energy supply companies.

All safety and warning information as well as the handling instructions in the accompanying documents must be observed.

Please keep these instructions in a safe place and pass them on to the next owner where applicable.

1.1 Validity

These instructions apply to several appliance versions. It is therefore possible that some of the features described do not apply to your appliance. The details of the figures contained herein may differ and are to be understood as schematic diagrams.

These instructions apply to the Professional 3.0 product range including the All Black model. To simplify things, the instructions do not include the product numbers for the different models.

1.2 Liability

. BORA Holding GmbH, BORA Vertriebs GmbH & Co KG, BORA APAC Pty Ltd and BORA Lüftungstechnik GmbH – hereinafter referred to as BORA – do not assume any liability for damage arising from disregard for or non-adherence to the documents included in the scope of delivery!

Furthermore, BORA shall not be held liable for damage caused by improper installation or failure to observe the safety and warning information!

1.3 Product conformity

The appliances comply with the following EU/EC regulations:

- 2014/30/EU EMC Directive
- 2014/35/EU Low Voltage Directive
- 2009/125/EC Ecodesign Directive
- 2011/65/EU RoHS Directive

Gas appliances meet the following directives:

- (EU) 2016/426 regulation on appliances burning gaseous fuels

The full text of the EU declaration of conformity is available at the following address:
https://www.bora.com

1.4 Data privacy

During operation your cooktop extractor saves pseudonymised data such as menu settings entered by you, operating hours of the individual technical units and the number of functions selected. Furthermore, your cooktop extractor documents errors in combination with the number of operating hours. Data can only be read out manually via your cooktop extractor. This decision is therefore your responsibility. These saved data then enable a rapid error search and troubleshooting in the event of servicing.

1.5 Presentation of information

The article described in these instructions is hereinafter also referred to as an appliance. All measurements are provided in millimetres.

Operating instructions

▶ Always follow all instructions in the prescribed order.

Enumerations

- Enumeration 1
- Enumeration 2

Info points

Information notes point to special features that must be taken into account.

Safety and warning information

⚠ DANGER

Type and source of danger
Results of non-compliance
▶ Measures to minimise risk

Please note:

- warning symbols draw attention to a high risk of injury.
- The signal word indicates the severity of that risk.

Warning symbol	Signal word	Risk
	Danger	Indicates an immediate, hazardous situation which causes death or serious injury if not respected.
	Warning	Indicates a potentially hazardous situation which can cause death or serious injury if not respected.
	Caution	Indicates a potentially hazardous situation which can cause minor injury if not respected.
	Note	Indicates a potentially hazardous situation which can cause property damage if not respected.

Tab. 1.1 Meaning of the warning symbols and signal words

2 Safety

The appliance complies with the stipulated safety requirements. The user is responsible for the safe use of the appliance, cleaning and maintenance. Improper use can lead to personal injury and damage to property.

2.1 Intended use

The appliance is solely intended for preparing food in private households.
This appliance is not intended for:

- outdoor use
- heating rooms
- cooling, ventilating or dehumidifying rooms
- use in mobile installation sites such as motor vehicles, ships or aeroplanes
- use with an external timer or a separate remote control system (except for emergency shutdown in the case of the cooktop extractor)
- use at altitudes of over 2000 m (metres above sea level)
- operation with an extractor hood (where a gas cooktop is installed)
- use when not fully installed

Any other use or any use that goes beyond that which is described here is classed as unintended.

BORA does not assume any liability for damages caused by incorrect installation, improper use or incorrect operation.

All misuse is prohibited!

2.2 General safety instructions

⚠ DANGER

Packaging components are a choking hazard

Packaging components (e.g. film, polystyrene) can be life-threatening for children.

- ▶ Store all packaging components out of reach of children.
- ▶ Dispose of the packaging properly and immediately.

⚠ DANGER

Risk of electric shock or injury from damaged surfaces

The underlying electronics can be exposed or damaged due to fissures, fractures or cracks in appliance surfaces (e.g. damaged glass), particularly in the vicinity of the operating unit. This can cause an electrical shock. Furthermore, a damaged surface can cause injuries.

- ▶ Do not touch the damaged surface.
- ▶ If there are any cracks, fissures or fractures, switch the appliance off immediately.
- ▶ Securely disconnect the appliance from the mains using the circuit breaker, fuses, automatic circuit breakers or contactor.
- ▶ Contact the BORA Service Team.

⚠ WARNING

Risk of injury or damage due to incorrect components or unauthorised modifications

Incorrect components can lead to personal injury or damage to the appliance. Modifications, additions or alterations to the appliance can lead to safety risks.

- ▶ Only use original components.
- ▶ Do not make any modifications, additions or alterations to the appliance.

⚠ WARNING

Risk of injury due to mechanical damage on the appliance

Mechanical damage (e.g. cracks, deformation, separation of adhesive seals, etc.) to the appliance, as well as to cables and accessories can cause injuries.

- ▶ Do not operate the appliance.
- ▶ Do not try to repair or replace damaged components yourself.
- ▶ Contact the BORA Service Team.

CAUTION

Appliance components can cause injury if dropped

Appliance components can cause injury if you drop them.

- ▶ Place any appliance components that have been removed in a safe place near the appliances.
- ▶ Ensure that no components removed from the appliances can fall on the floor.

CAUTION

Risk of injury from heavy lifting

If not handled correctly, carrying and installing appliances can cause injury to the limbs or torso.

- ▶ If necessary, carry and install the appliance with another person.
- ▶ Use appropriate aids to prevent damage or injury.

CAUTION

Damage from improper use

The appliance surfaces must not be used as work or storage surfaces. This can damage the appliances (particularly in the case of hard and sharp objects).

- ▶ Never use the appliances as work or storage surfaces.
- ▶ Keep hard or sharp objects away from the appliance surfaces.

PLEASE NOTE

Faults and errors

In the event of faults or incorrect use, error messages will be displayed.

- ▶ In the case of faults and errors, follow the instructions in the “Troubleshooting” chapter.
- ▶ In the event of any faults or errors that are not mentioned, switch the appliance off and contact BORA Service.

2.3 Safety information for installation

⚠ DANGER

Risk of injury from incorrect assembly

Failure to observe the installation instructions can lead to injury.

- ▶ The appliance must only be installed and assembled by trained specialists who are familiar with and comply with the standard national regulations and supplementary regulations of the local utility companies.
- ▶ The appliance may only be installed with the power disconnected.
- ▶ Work on electrical components must only be conducted by trained electrical personnel.
- ▶ Conduct all work extremely attentively and conscientiously.
- ▶ Before handing the appliance or system over to the end user, ensure that it has been correctly installed.

⚠ DANGER

Risk of electric shock from damaged appliance

A damaged appliance can cause an electric shock.

- ▶ Check the appliance for visible damage prior to installation.
- ▶ Do not install or connect any damaged appliances.
- ▶ Do not operate any damaged appliances.

⚠ DANGER

Risk of electric shock from incorrect stripping of cables

Incorrect stripping of the connection cable to external switching devices results in a risk of electric shock.

- ▶ Ensure that the connection cable is secured with the strain relief clamp within the control unit.
- ▶ Ensure that the stated stripping lengths are adhered to.

CAUTION

Risk of burning from control knobs that are not positioned optimally

If the control knobs are not installed in a suitable place, during operation there is a risk of sustaining burns from the cooktop surface.

- ▶ Only install the control knobs in a suitable place, which is practical and safe.

PLEASE NOTE

Appliance damage caused by incorrect wiring

The electrical safety of the appliance is only guaranteed if it is connected to a protective conductor system that has been installed in line with regulations.

- ▶ Work on electrical components must only be conducted by trained electrical personnel.
- ▶ Ensure that this basic safety precaution is met. The appliance must be suitable for the regional voltage and frequency.
- ▶ Check the information on the identification plate and in the event of deviations, do not connect the appliance.
- ▶ Do not connect the appliance to the mains until the duct system has been installed or the recirculation filter has been fitted.
- ▶ Only use the connection cables supplied.

PLEASE NOTE

Appliance damage caused by incorrect installation clearances

Failure to adhere to installation clearances can lead to damage to the appliance and kitchen units, as well as restricted functions.

- ▶ During installation maintain the minimum clearance stated in the Installation chapter.

2.3.1 Safety instructions – cooktop extractor installation

⚠ DANGER

Risk of smoke inhalation

When the cooktop extractor is used in exhaust air mode, it draws in air from the room it is installed in and from neighbouring rooms. Without sufficient air, there will be a drop in air pressure. When used at the same time as a fireplace that is dependent on the air in the room, noxious gases can be sucked into the living areas from the chimney or outlet shaft.

- ▶ Make sure that there is always a sufficient air supply.
- ▶ Only use reliable, tried-and-tested switching devices, (e.g. window contact switch, low pressure warning device) and have them approved by a qualified expert (certified chimney sweep).

⚠ WARNING

Risk of injury due to turning fan wheel

There is a risk of injury while the fan is turning.

- ▶ Only install the device with the power disconnected.
- ▶ Connect both sides of the fan to the duct system before commissioning.

CAUTION

Risk of injury due to turning fan wheel

There is a risk of the vicinity of the fan being reached in the case of short air channels.

- ▶ Never reach through the air outlet into the vicinity of the fan.
- ▶ Always install fans so that it is not possible to touch them via the air outlet.
- ▶ In the case of air channels shorter than 900 mm between the fan and air outlet, install a guard to prevent access.
- ▶ Odour filters (activated charcoal filters) do not provide sufficient protection.

2.3.2 Safety information for cooktop installation

⚠ DANGER

Risk of electric shock from damaged power supply cable

If the power supply cable is damaged (e.g. during installation or by coming into contact with hot cooking surfaces), this can cause an (lethal) electric shock.

- ▶ Make sure that the connection cable does not become trapped or damaged.
- ▶ Make sure that the power supply cable does not come into contact with hot cooking surfaces.

⚠ DANGER

Risk of electric shock from incorrect mains connection

Connecting the appliance to the mains incorrectly poses a risk of electric shock.

- ▶ Make sure that the appliance has a fixed connection to the mains voltage.
- ▶ Make sure that the appliance is connected to a properly installed protective conductor system.
- ▶ Make sure that technical equipment is provided to enable all of the appliance's poles to be disconnected from the mains with a contact opening width of at least 3 mm (circuit breaker and automatic circuit breakers, fuses, contactor).

⚠ DANGER

Risk of explosion and asphyxiation from gas

Leaking gas can lead to an explosion and result in severe injuries and property damage, or asphyxiation.

- ▶ Keep sources of ignition (naked flames, electric fires) away and do not operate any light switches, or switches on electrical appliances.
- ▶ Do not remove plugs from sockets (risk of sparking).
- ▶ Close the gas supply immediately and turn off the mains supply.
- ▶ Ensure there is a good supply of fresh air (open doors and windows).
- ▶ Plug any leaks immediately.
- ▶ Before connecting the appliance, check that the appliance settings comply with local connection requirements (gas type and pressure).

⚠ WARNING

Risk of burns from wrongly placed control knobs

If control knobs are not fitted according to the installation instructions, they can become hot. Touching the hot control knobs can cause burns.

- ▶ Control knobs must be fitted at least 10 cm from the edge of the cooktop.
- ▶ If it is not possible to maintain a distance of at least 10 cm, measures must be put in place to protect the control knobs from the heat.

⚠ WARNING

Risk of injury from incorrect gas installation

Failure to observe the gas installation instructions can lead to injury.

- ▶ Gas installation, appliance installation and replacing the gas nozzles, as well as changing the gas type and pressure, may only be carried out by reliable trained specialists, who are familiar with and comply with the standard national regulations and supplementary regulations of the local utility companies.
- ▶ Observe the special instructions on changing the gas type and pressure and the specifications for changing the gas nozzles in the nozzle table (see Operating instructions).
- ▶ BORA gas cooktops must only be used with BORA cooktop extractors.

2.4 Safety instructions – repairs, servicing and spare parts

⚠ DANGER

Risk of injury when carrying out repairs

Insufficient expertise can lead to injury when carrying out repairs.

- ▶ The appliance must only be repaired and serviced by trained specialists who are familiar with and comply with the standard national regulations and supplementary regulations of the local utility companies.
- ▶ Safely disconnect the appliance from the mains supply.
- ▶ Work on electrical components must only be conducted by trained electrical personnel.
- ▶ A damaged power supply cable must be replaced by a suitable power supply cable.

⚠ WARNING

Risk of injury or damage from improper repairs

Incorrect components can lead to personal injury or damage to the appliance. Modifications, additions or alterations to the appliance can lead to safety risks.

- ▶ Only use original spare parts for repairs.
- ▶ Do not make any modifications, additions or alterations to the appliance.

CAUTION

Risk of injury during repair of gas appliances

Insufficient expertise can lead to injury when disassembling the appliance.

- ▶ The gas connection must only be worked on by reliable trained specialists who are familiar with and comply with the standard national regulations and supplementary regulations of the local utility companies.

2.5 Safety instructions – disassembly and disposal

⚠ DANGER

Risk of injury during disassembly

Insufficient expertise can lead to injury when disassembling the appliance.

- ▶ It must only be disassembled by trained specialists who are familiar with and comply with the standard national regulations and supplementary regulations of the local utility companies.
- ▶ Safely disconnect the appliance from the mains supply.
- ▶ Work on electrical components must only be conducted by trained electrical personnel.

⚠ DANGER

Risk of electric shock from incorrect disconnection

Incorrectly disconnecting the appliance from the mains results in a risk of electric shock.

- ▶ Safely disconnect the appliance from the mains supply.
- ▶ Use an authorised measuring device to ensure that there is no power to the appliance.
- ▶ Do not touch exposed contacts on the electronic unit as they may contain residual charge.

⚠ DANGER

Risk of electric shock from residual charge

Electrical components in the appliance can contain residual charge and cause an electric shock.

- ▶ Do not touch any exposed contacts.

CAUTION

Risk of injury during disassembly of gas appliances

Insufficient expertise can lead to injury when disassembling the appliance.

- ▶ The gas connection must only be worked on by reliable trained specialists who are familiar with and comply with the standard national regulations and supplementary regulations of the local utility companies.

3 Technical data

3.1 Cooktop extractor PKA3/ PKA3AB

Parameter	Value
Supply voltage	220–240 V
Frequency	50–60 Hz
Power consumption (incl. additional universal fans)	550 W
Dimensions (width x depth x height)	482 x 540 x 176 mm
Weight (incl. accessories and packaging)	9.25 kg
Cooktop extractor	
Power levels	1–9, P

Tab. 3.1 Technical data for PKA3/PKA3AB

3.2 Cooktop extractor system with integrated fan PKAS3/ PKAS3AB

Parameter	Value
Supply voltage	220–240 V
Frequency	50–60 Hz
Power consumption (incl. additional universal fans)	550 W
Dimensions (width x depth x height)	468 x 540 x 199 mm
Weight (incl. accessories and packaging)	12.5 kg
Cooktop extractor	
Power levels	1–9, P

3.3 Surface induction cooktop PKFI3/PKFI3R

Parameter	Value
Supply voltage	220–240 V
Frequency	50–60 Hz
Power consumption	3680 W
Fuse protection	1 x 16 A
Cooktop dimensions	370 x 540 x 52 mm
Weight (incl. accessories and packaging)	8.1 kg
Cooktop	
Power levels	1–9, P
Heat retention levels	3
Front cooking zone size	230 x 230 mm
Front cooking zone output	2100 W
Front cooking zone power setting output	3680 W
Rear cooking zone size	230 x 230 mm
Rear cooking zone output	2100 W
Rear cooking zone power setting output	3680 W

3.4 Induction cooktop PKI3

Parameter	Value
Supply voltage	220–240 V
Frequency	50–60 Hz
Power consumption	3680 W
Fuse protection	1 x 16 A
Cooktop dimensions	370 x 540 x 52 mm
Weight (incl. accessories and packaging)	8.0 kg
Cooktop	**Value**
Power levels	1–9, P
Heat retention levels	3
Front cooking zone size	Ø 230 mm
Front cooking zone output	2300 W
Front cooking zone power setting output	3680 W
Rear cooking zone size	Ø 165 mm
Rear cooking zone output	1400 W
Rear cooking zone power setting output	2200 W

3.5 Induction wok cooktop PKIW3

Parameter	Value
Supply voltage	220–240 V
Frequency	50–60 Hz
Power consumption	3000 W
Fuse protection	1 x 16 A
Cooktop dimensions	370 x 540 x 128 mm
Weight (incl. accessories and packaging)	9.5 kg
Cooktop	
Power levels	1–9, P
Heat retention levels	3
Cooking zone size	Ø 310 mm
Cooking zone output	2400 W
Cooking zone power setting output	3000 W

3.6 HiLight cooktop, 3-ring/2-ring PKC3

Parameter	Value
Supply voltage	380–415 V 2N~
Frequency	50–60 Hz
Power consumption	4400 W
Fuse protection	2 x 16 A
Cooktop dimensions	370 x 540 x 73 mm
Weight (incl. accessories and packaging)	8.7 kg
Cooktop	
Power levels	1–9, 2-ring, 3-ring
Heat retention levels	3
Front cooking zone size	Ø 120 mm
Front cooking zone output	800 W
Front cooking zone 2-ring additional switching size	Ø 180 mm
Front cooking zone 2-ring additional switching output	1600 W
Front cooking zone 3-ring additional switching size	Ø 235 mm
Front cooking zone 3-ring additional switching output	2500 W
Rear cooking zone size	Ø 120 mm
Rear cooking zone output	800 W
Rear cooking zone 2-ring additional switching size	Ø 200 mm

3.7 HiLight cooktop, 3-ring/ roaster PKCB3

Cooktop	Value
Supply voltage	380–415 V 2N~
Frequency	50–60 Hz
Power consumption	5100 W
Fuse protection	2 x 16 A
Cooktop dimensions	370 x 540 x 73 mm
Weight (incl. accessories and packaging)	8.9 kg
Cooktop	
Power levels	1–9, 2-ring, 3-ring, roaster

Cooktop	Value
Heat retention levels	3
Front cooking zone size	Ø 120 mm
Front cooking zone output	800 W
Front cooking zone 2-ring additional switching size	Ø 180 mm
Front cooking zone 2-ring additional switching output	1600 W
Front cooking zone 3-ring additional switching size	Ø 235 mm
Front cooking zone 3-ring additional switching output	2500 W
Rear cooking zone size	Ø 165 mm
Rear cooking zone output	1500 W
Cooking zone roaster additional switching size	290 x 165 mm
Cooking zone roaster additional switching output	2600 W

3.8 Hyper cooktop, 1-ring/2-ring PKCH3

Parameter	Value
Supply voltage	380–415 V 2N~
Frequency	50–60 Hz
Power consumption	5100 W
Fuse protection	2 x 16 A
Cooktop dimensions	370 x 540 x 73 mm
Weight (incl. accessories and packaging)	8.7 kg
Cooktop	
Power levels	1–9, Hyper level, 2-ring additional switching
Heat retention levels	3
Front cooking zone size	Ø 235 mm
Front cooking zone output	2100 W
Hyper level output	3200 W
Rear cooking zone size	Ø 120 mm
Rear cooking zone output	800 W
Rear cooking zone 2-ring additional switching size	Ø 200 mm
Rear cooking zone 2-ring additional switching output	1900 W

3.9 Tepan stainless steel grill PKT3

Parameter	Value
Supply voltage	380–415 V 2N~
Frequency	50–60 Hz
Power consumption	4800 W
Fuse protection	2 x 16 A
Cooktop dimensions	370 x 540 x 73 mm
Weight (incl. accessories and packaging)	15.8 kg
Cooktop	
Temperature control (power levels)	80–250°C (250°C = P)
Front cooking zone size	295 x 230 mm
Front cooking zone output	2400 W
Rear cooking zone size	295 x 230 mm
Rear cooking zone output	2400 W
Temperature control range	70 - 250 °C

3.10 Gas cooktop PKG3

Parameter	Value
Supply voltage	220–240 V
Frequency	50–60 Hz
Total burner output	5000 W
Power rating	20 W
Fuse protection	1 x 0.5 A
Gas connection	1/2” internal thread
Cooktop dimensions	370 x 540 x 73 mm
High-power burner pan support dimensions	270 x 270 x 25/50 mm
Normal burner pan support dimensions	235 x 235 x 25/50 mm
Weight (incl. accessories and packaging)	11.5 kg
Cooktop	
Power levels	1–9, P
Heat retention levels	3
High-power burner	800–3000 W
Normal burner	550–2000 W
Total nominal connection values G20/20 mbar:	5000 W | 0.449 m^3/h

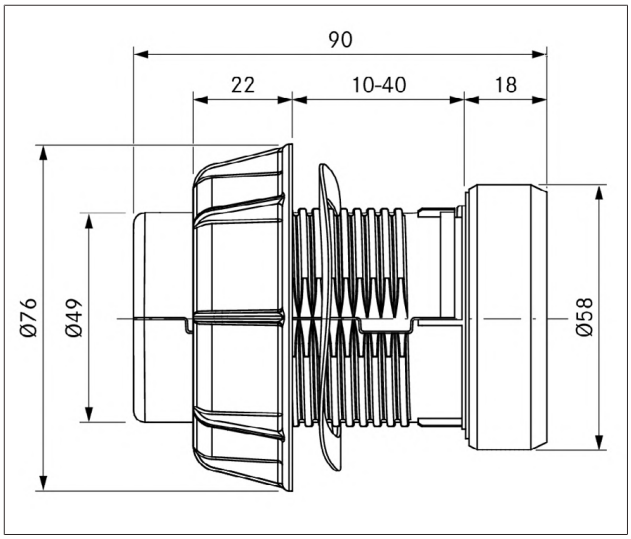

Fig. 3.33 Control knob dimensions

4 Installation

▶ Observe all safety and warning information (see "2 Safety").
▶ Please observe the documents and instructions provided.

4.1 General installation instructions

The appliance must not be installed above cooling devices, dishwashers, stoves, ovens, washing machines or dryers.

The contact surfaces of the worktops and wall sealing strips must be made of a heat-resistant material (up to approx. 100 °C).

Worktop cut-outs must be moisture-sealed using suitable means and, where necessary, fitted with a thermal insulator.

External devices may only be connected to the cooktop extractor connections provided.

Extremely bright lights aimed directly at the appliances can cause colour variations in the appliances and are thus to be avoided.

All packaging must be removed before using the appliance for the first time.

General installation instructions for cooktops

▶ Make sure that the area below the cooktop has a sufficient air supply.

To maintain the level of performance and avoid overheating, sufficient ventilation must be ensured below the cooktops.

The performance is affected or the cooktops overheat if the warm air beneath the cooktops cannot escape.

In the event of overheating, the cooktop power is reduced or the appliance is switched off completely.

If cable protection (false floor) is planned beneath the appliance, this must be fitted so it does not obstruct ventilation.

Additional installation instructions for Australia and New Zealand (AU/NZ):

The gas hose must be checked every 5 years and replaced if necessary. The gas hose must meet the requirements of AS/NZS 1869.

Restricted functions when using the cooktops without a cooktop extractor

If cooktops are installed and operated without a cooktop extractor, only limited functions will be available. The following functions will not be available:

- System functions
  - Pause function
  - Short-time timer
  - Child lock
- All settings/functions in the configuration menu

4.1.1 Operating the cooktop extractor in the exhaust air mode and where there is a fireplace dependent upon the air supply in the room

National and regional laws and regulations must be observed with regard to the exhaust duct design.

A sufficient air supply must be ensured.

Fireplaces that depend on the air in the room (e.g. gas, oil, wood or coal-fired heaters, continuous-flow water heaters, instantaneous water heaters) draw in air from the room in which they are installed and release the exhaust fumes into the outside air via an exhaust system (e.g. chimney).
If the cooktop extractor is used in exhaust air mode, it draws in air from the room in which it is installed as well as from neighbouring rooms. Without sufficient air, there will be a drop in air pressure. Toxic gases could be drawn out of the chimney or extraction ducting and back into the room.

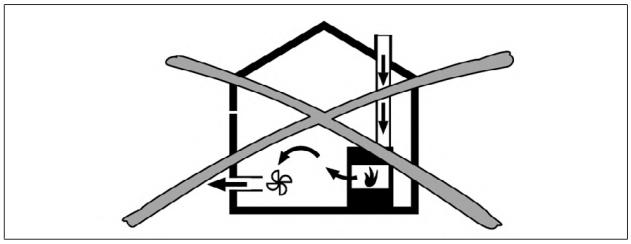

Fig. 4.1 Exhaust air installation – not permitted

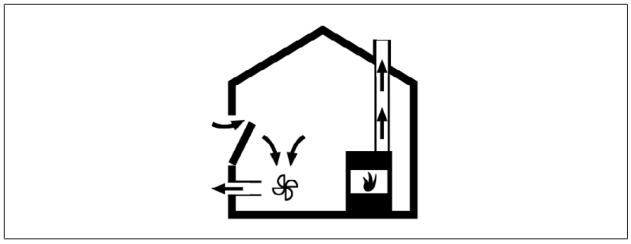

Fig. 4.2 Exhaust air installation – correct

▶ If simultaneously operating both the cooktop with a fireplace and the cooktop extractor in the room they are installed, ensure that...

- ...the maximum low pressure is 4 Pa;
- ...a safety device (e.g. window contact switch, low pressure warning device) is used to ensure that a sufficient supply of fresh air is guaranteed;
- ...the exhaust air is not channelled into a chimney that is used for exhaust gases of appliances operated with gas or other combustibles;
- ...the installation is checked and approved by an authorised certified engineer (e.g. heating engineer).

No window contact switches may be installed that separate the control unit from the power supply (phase separation). Only the Home In interface is to be used

If the cooktop extractor is used exclusively in recirculation mode, simultaneous operation with a fireplace dependent on the air in the room is possible without any additional safety measures.

4.2 Checking the scope of delivery

Checking the scope of delivery

- ▶ Make sure the delivery is complete and check it for damage.
- ▶ Immediately inform the BORA Service TeamTeam if parts are missing or damaged.
- ▶ Do not under any circumstances install parts which are damaged.
- ▶ Dispose of transport packaging in the proper manner (see "5 Decommissioning, disassembly and disposal").

4.3 Tools and aids

The following tools, among others, are required to correctly install the cooktop:

- pencil
- tape measure or folding metre stick
- conventional or battery-operated drill
- Ø50 mm centre bit
- black, heat-resistant silicone sealant
- slotted screwdriver
- size 10 Torx screwdriver/key
- size 20 Torx screwdriver key

4.4 Assembly instructions

4.4.1 Installation clearances

▶ Observe the required clearance around the worktop cut-out.

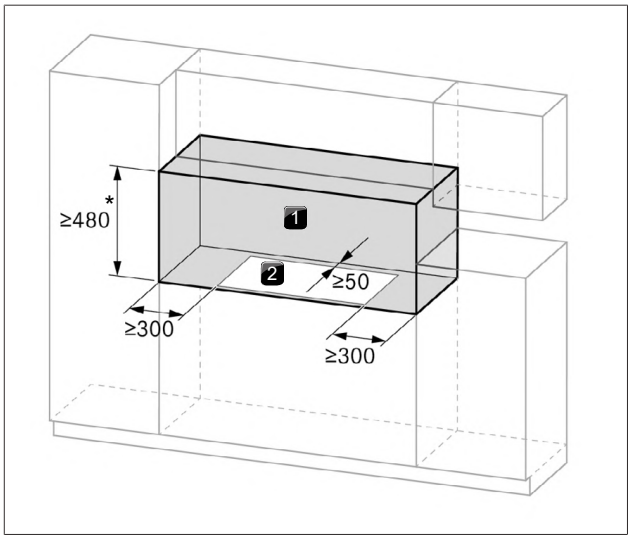

Fig. 4.3 Required clearance

[1] Required clearance
[2] Worktop cut-out
[*] 650 mm in the case of gas cooktops

4.4.2 Minimum installation dimensions

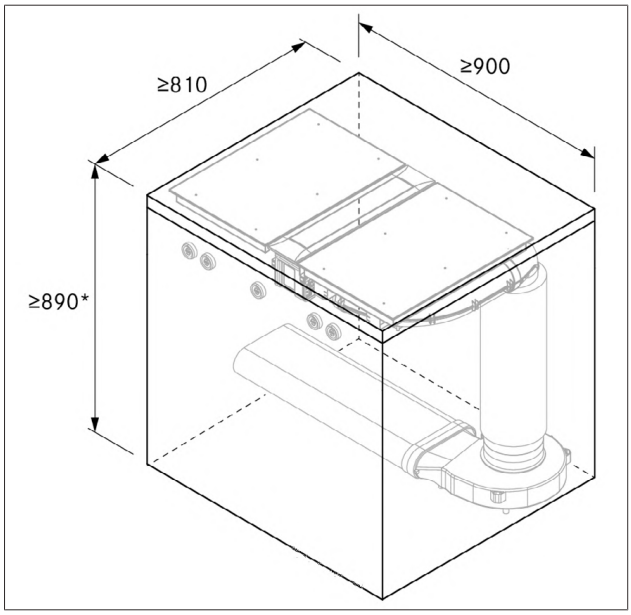

Fig. 4.4 Minimum installation dimensions (standard set-up)

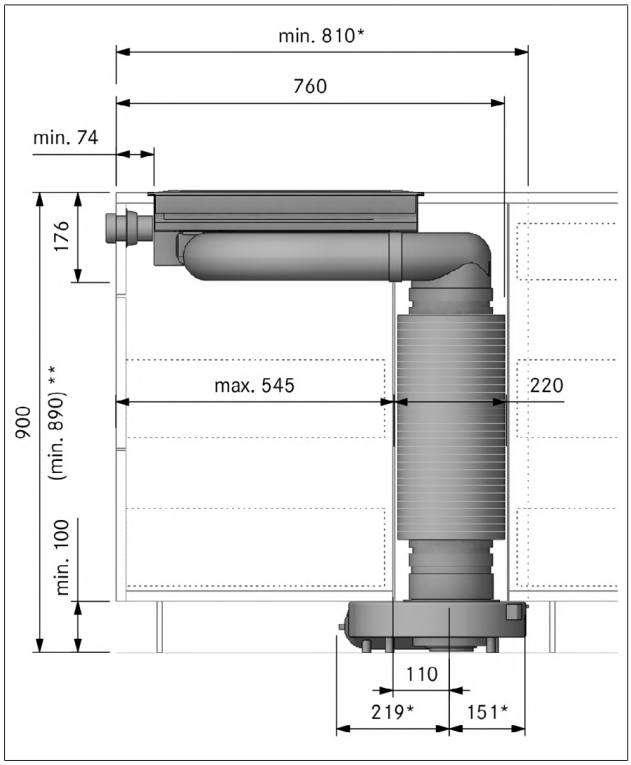

Fig. 4.5 Appliance installation dimensions for standard set-up with round silencer

[*] Sockel fan ULS outgoing airflow to the left
[**] without duct connection ERV 840–890 mm

4.4.3 Worktop

▶ Create the worktop cut-out taking into account the specified cut-out dimensions.
▶ Make sure that the cut surfaces of the worktops are properly sealed.
▶ Comply with the instructions of the worktop manufacturer.

4.4.4 Kitchen units

- Cross bars on the kitchen unit in the area of the worktop cut-out may need to be removed.
- No false floor is necessary below the cooktop. If cable protection (false floor) is planned, the following must be taken into account:
  - It must be able to be removed for maintenance work.
  - To ensure sufficient cooktop ventilation, a minimum distance of 15 mm to the bottom edge of the cooktop extractor is to be observed.
- The drawers and/or shelves in the floor unit must be removable.
- For correct installation, the drawers of the floor unit must be shortened depending on the installation situation.

4.4.5 Special assembly instructions for the gas cooktop

Taking into account the applicable valid regulations, the cooktop must be connected to the gas line with an upstream stopcock.

The connection between the gas cooktop and the gas connection must be provided at the installation site.

The hose connection must be laid in such a way that it is not subject to deformation, buckling or abrasion.

The stopcock and gas supply pipe connections must be accessible.

The pressure regulator must correspond to the set gas type and set gas pressure and must meet local and legal requirements.

The gas connection hose line must not come into contact with smoke or the flue outlet of an oven.

The hose line must not come into contact with hot surfaces on the cooktop or other devices.

Positioning of the gas cooktop with two cooktop extractors

If the gas cooktop is used in a model with two cooktop extractors, it is to be installed at the side. If installed between the cooktop extractors, the pull of air on both sides may affect the flames.

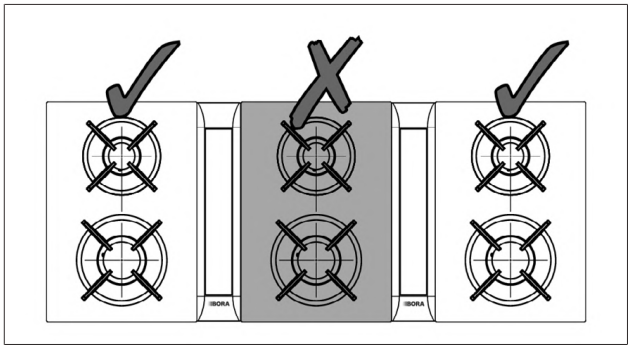

Fig. 4.6 Positioning of the gas cooktop with two cooktop extractors

Air supply for the gas cooktop

To ensure a sufficient air supply, an opening cross-section of at least 50 cm^2 is required in the front of the kitchen unit, or an opening cross-section of at least 150 cm^2 in the plinth area.

▶ Make sure that the area below the cooktop has a sufficient air supply.

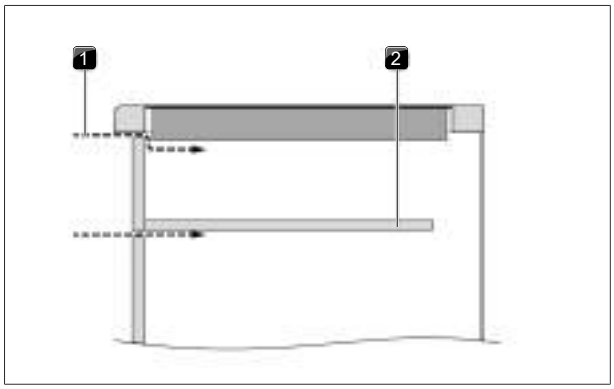

Fig. 4.7 Air supply at front of the unit

[1] Air supply via the front of the unit (opening cross-section ≥50 cm^2)
[2] Optional cable protection (shortened)

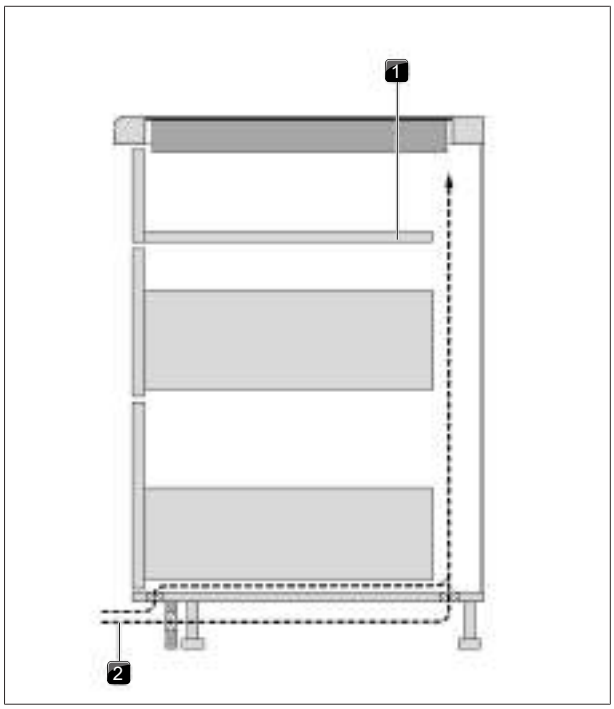

Fig. 4.8 Plinth area air supply

[1] Optional cable protection (shortened)
[2] Air supply via the plinth area (opening cross-section ≥150 cm^2)

4.4.6 Return flow of recirculated air

In the case of recirculation systems, a return flow aperture must be provided in the kitchen unit to guide the clean recirculated air out of the unit and back into the room. The return flow aperture can be created above a shortened plinth. A slatted plinth with at least the minimum opening cross-section can also be used.

▶ Decrease the height of the plinth panel or create corresponding openings in the plinth.

▶ The cross-section of the return flow aperture must be ≥ 500 cm^2 (≥ 1000 cm^2 in the case of gas appliances) for each cooktop extractor.

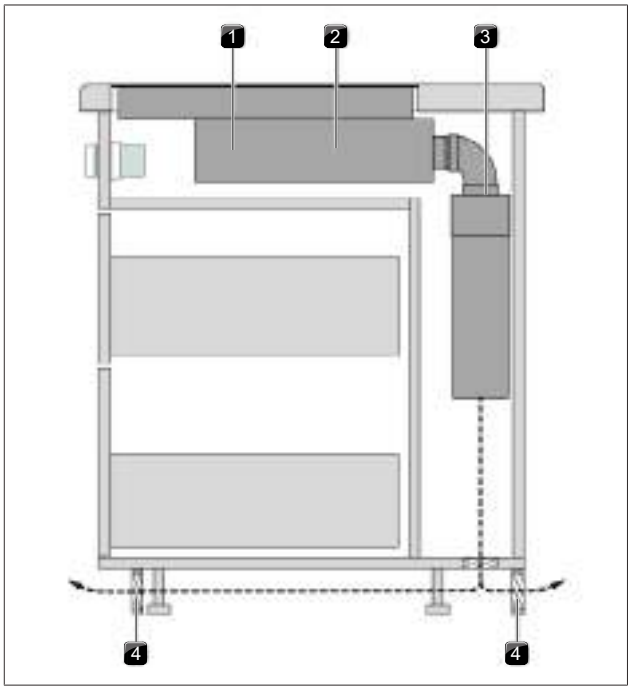

Fig. 4.9 Example of recirculated-air-return-flow planning

[1] Cooktop
[2] Cooktop extractor
[3] Air cleaning box
[4] Return flow aperture

If several cooktop extractors need to be installed in recirculation mode, the return flow apertures must be enlarged.
Example: 2 recirculation systems = 2 x (>500 cm^2)
Example: 2 recirculation systems with gas cooktop = 2 x (>1000 cm^2)

If the gas flame goes out, is excessively affected by the extractor and/or the flame is not as it should be (e.g. soot production, flame blowback, etc.), the return flow aperture must be enlarged.

4.5 Cut-out dimensions

4.5.1 Worktop overhang

Please note the worktop overhang x when creating the worktop cut-out. Applies to flush installation and surface mounting.

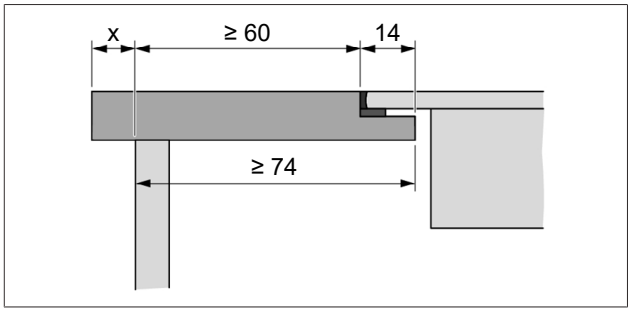

Fig. 4.10 Worktop overhang

4.5.2 Flush installation

[3] Cooktop (x 3)
[4] Cooktop extractor (x 2)
[5] Worktop
[6] Fixed front panel

4.6.4 Fitting the control knob

▶ Remove the knob ring.
▶ Unscrew the universal nut.
▶ Remove the wave spring.
▶ Insert the knob housing from the front through the hole in the panel.
▶ Attach the wave spring to the knob housing.
● In the case of steel fronts, wave springs must not be used.
▶ Screw the universal nut onto the knob housing from the rear and tighten a little.
▶ Align the knob housing so it is level.
▶ Tighten the universal nut.
● The wave spring must be pressed flat.
▶ Remove the sticker.
▶ Place the knob ring on the knob housing.

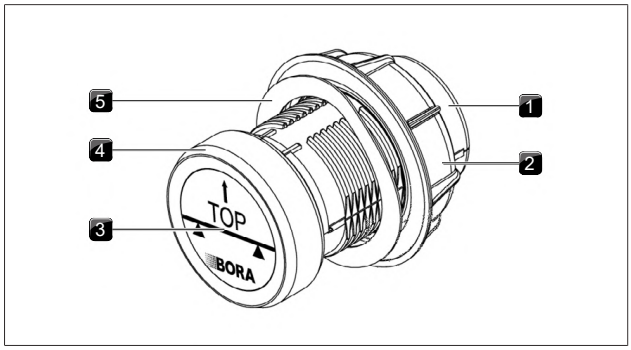

Fig. 4.21 Structure of control knob

[1] Knob housing
[2] Universal nut
[3] Sticker
[4] Knob ring
[5] Wave spring

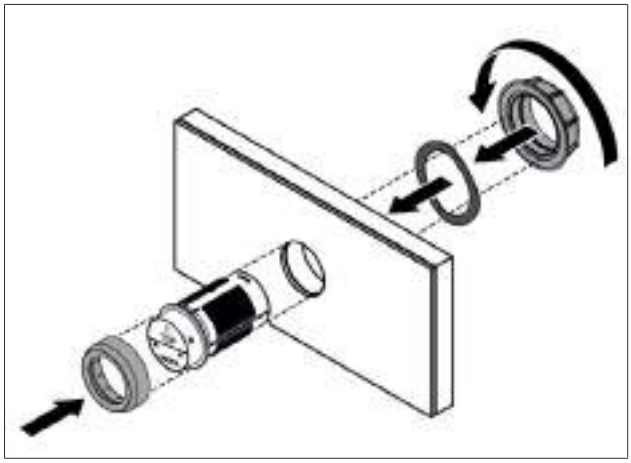

Fig. 4.22 Fitting the control knob

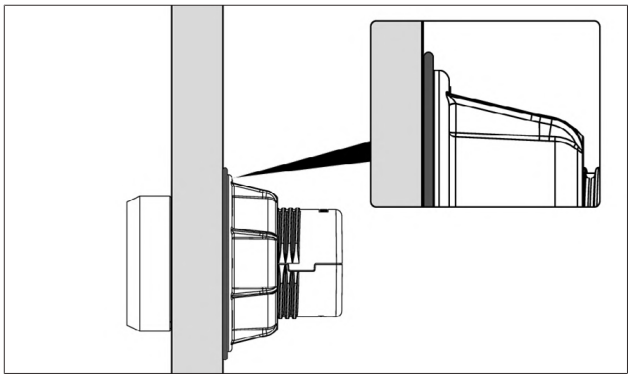

Fig. 4.23 Wave spring when installation is complete

4.7 Planning variations for PKA3/ PKA3AB

With the PKA3/PKA3AB cooktop extractor, the air can be channelled off to the left or to the right, according to requirements. Thanks to the pre-assembled curved duct piece or the straight duct piece (included in the scope of delivery) the air can be channelled around a 90° bend to the rear or straight out to the side. When using the straight duct piece, an additional EFD shallow seal is required (not included in the scope of delivery). The cooktop extractor is delivered with a pre-assembled curved duct piece to the right.

4.7.1 Airflow straight to the side

When the air is channelled straight out to the side, the cooktop can be installed rotated by 180°. In this case, the cover frame must also be rotated.
▶ Unscrew the Torx screw that attaches the holding plate to the curved duct piece.
▶ Unscrew the 2 Torx screws that attach the holding plate to the duct piece adapter.
▶ Remove the holding plate.

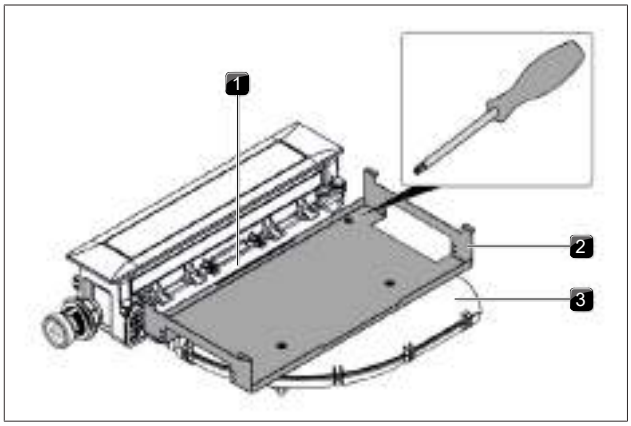

Fig. 4.24 Removing the holding plate

[1] Duct piece adapter
[2] Holding plate
[3] Curved duct piece

▶ Separate the curved duct piece from the duct piece adapter.
▶ To do this, carefully prise the plug connection open with a slotted screwdriver first.
▶ Pull the curved duct piece out.
▶ If necessary, rotate the cover frame by 180°.

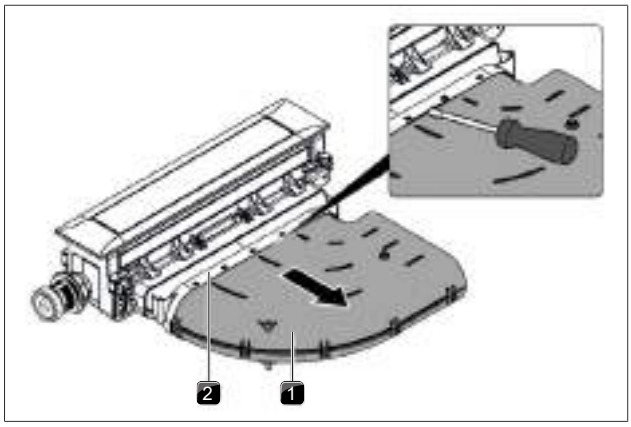

Fig. 4.25 Disassemble the curved duct piece

[1] Curved duct piece
[2] Duct piece adapter

▶ Push the straight duct piece onto the duct piece adapter until it clicks into place in the fastening lugs.
▶ Make sure that no air gap has formed between the components.
▶ Attach the holding plate to the duct piece adapter with 2 screws only.

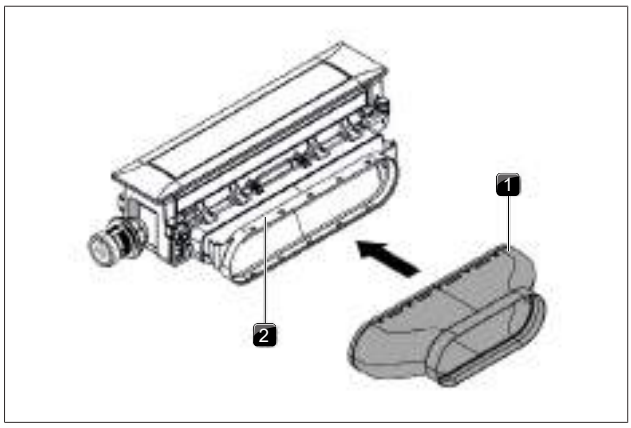

Fig. 4.26 Installing the straight duct piece

[1] Straight duct piece
[2] Duct piece adapter

4.7.2 Airflow towards the left

The PKA3/PKA3AB cooktop can be installed rotated by 180°, meaning that the air is channelled away to the left.
▶ Remove the holding plate and the curved duct piece.
▶ Rotate the cover frame by 180°.
▶ Turn the curved duct piece over.
▶ Push the rotated curved duct piece back onto the duct piece adapter until it clicks into place in the fastening lugs.

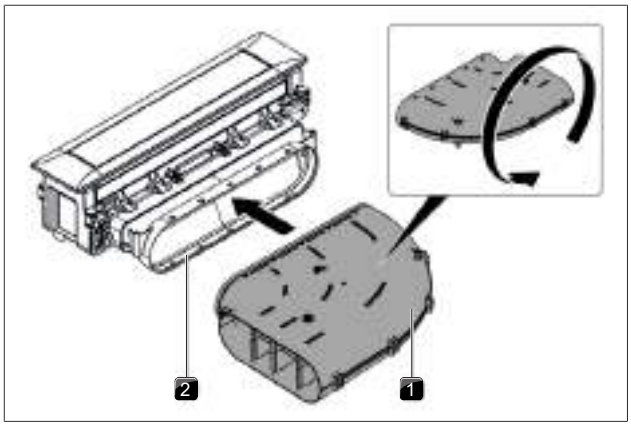

Fig. 4.27 Turning the curved duct piece over

[1] Curved duct piece
[2] Duct piece adapter

▶ Make sure that no air gap has formed between the components.
▶ Attach the holding plate.

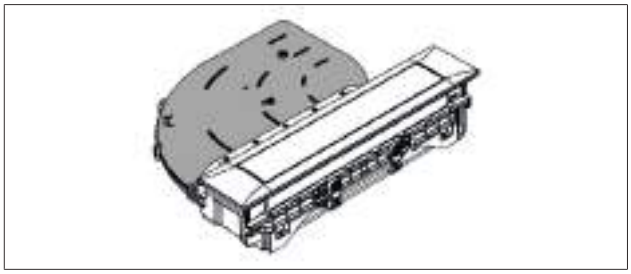

Fig. 4.28 Airflow to the left with the curved duct piece

4.7.3 Rotating the cover frame by 180°

To ensure correct orientation of the cover frame, this must also be rotated by 180°.
▶ Turn the cooktop extractor round and lay it carefully on a soft surface (e.g. a blanket) with the visible surface facing upwards.
▶ Carefully remove the holding clamps (x 18) with a screwdriver.

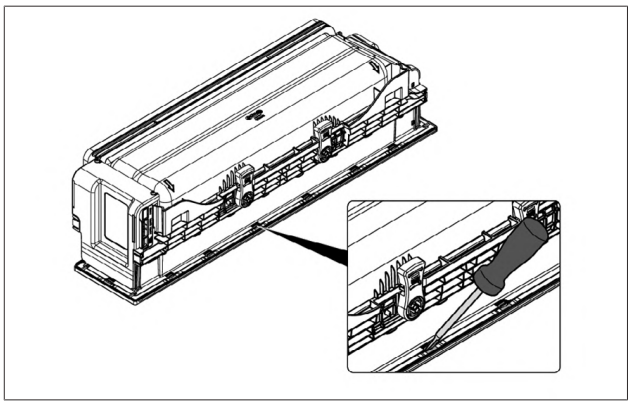

Fig. 4.29 Removing the cover frame

▶ Turn the cooktop extractor round and remove the cover frame.
▶ Rotate the cover frame by 180°.
▶ Put the cover frame back on the cooktop extractor.
▶ Make sure that the holding clamps click into place.

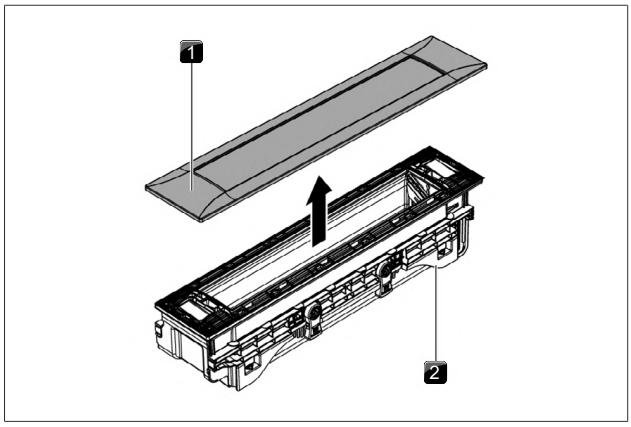

Fig. 4.30 Removing the cover frame

[1] Cover frame
[2] Cooktop extractor

4.8 Installing the cooktop extractor

Clearance of one millimetre should be planned between the built-in appliances. A clearance of two millimetres should be planned around the built-in appliances.

4.8.1 Fitting the cooktop extractor

▶ Place the cooktop extractor in the middle of the worktop cut-out provided.
▶ Position the cooktop extractor with precision.

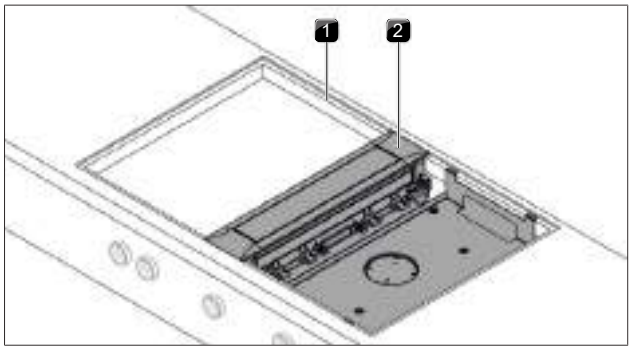

Fig. 4.31 Fitting the cooktop extractor

[1] Worktop cut-out
[2] Cooktop extractor

▶ If applicable, insert the height adjustment plates.

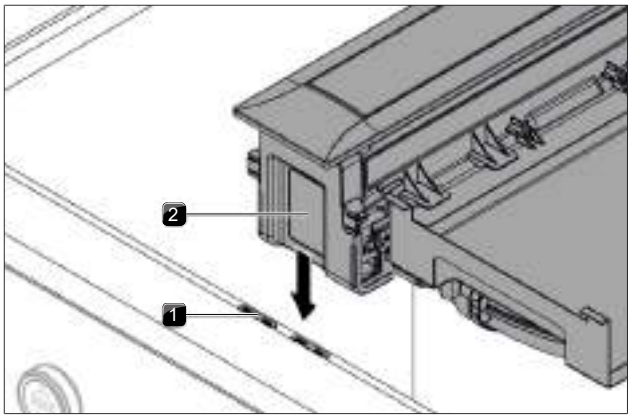

Fig. 4.32 Height adjustment plates

[1] Height adjustment plate
[2] Cooktop extractor

▶ The cooktop extractor is to be installed 0.5 mm higher than the cooktops.

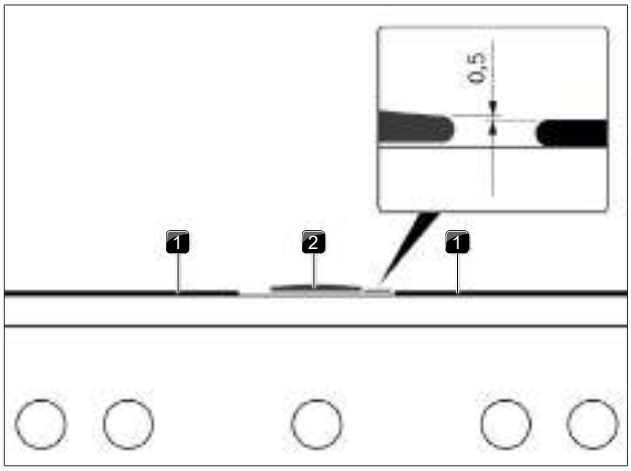

Fig. 4.33 Height difference

[1] Cooktop
[2] Cooktop extractor

4.8.2 Securing the cooktop extractor

Preparing the mounting brackets

The cooktop extractor is secured using the four mounting brackets provided. The symbols on the mounting brackets show which side to use for surface mounting and which to use for flush installation. The lettering shows the cutting mark corresponding to the worktop thickness.

▶ If necessary, shorten the mounting brackets according to the thickness of the worktop.
▶ To do this, cut the mounting brackets at the appropriate cut marks using a utility knife.
▶ Depending on the installation type, turn the mounting brackets to the left or right (flush installation or surface mounting).

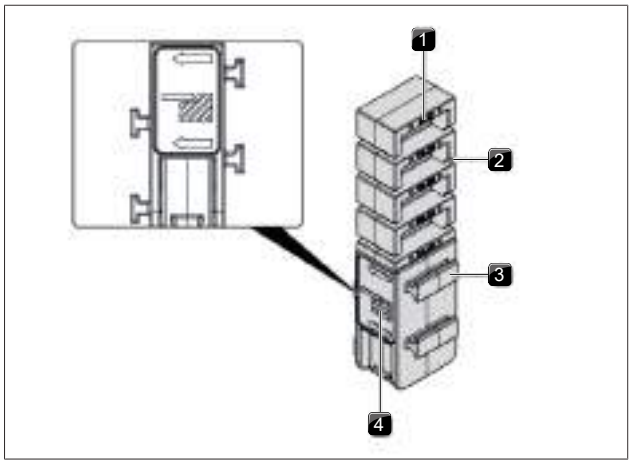

Fig. 4.34 Mounting bracket – right side (flush installation)

[1] Worktop thickness lettering (in mm)
[2] Cut marks (x 4)
[3] Fastening lugs (2 on each side)
[4] Marking for flush installation

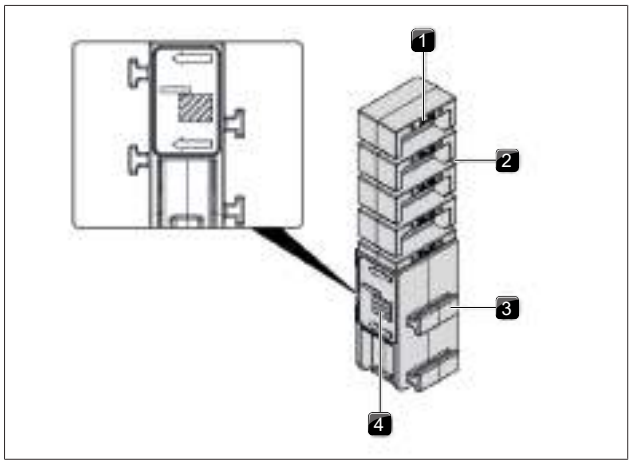

Fig. 4.35 Mounting bracket – left side (surface mounting)

[1] Worktop thickness lettering (in mm)
[2] Cut marks (x 4)
[3] Fastening lugs (2 on each side)
[4] Marking for surface mounting

Securing the cooktop extractor

▶ Push the mounting brackets into the holders provided on the cooktop extractor or the alternative positions on the holding plate.

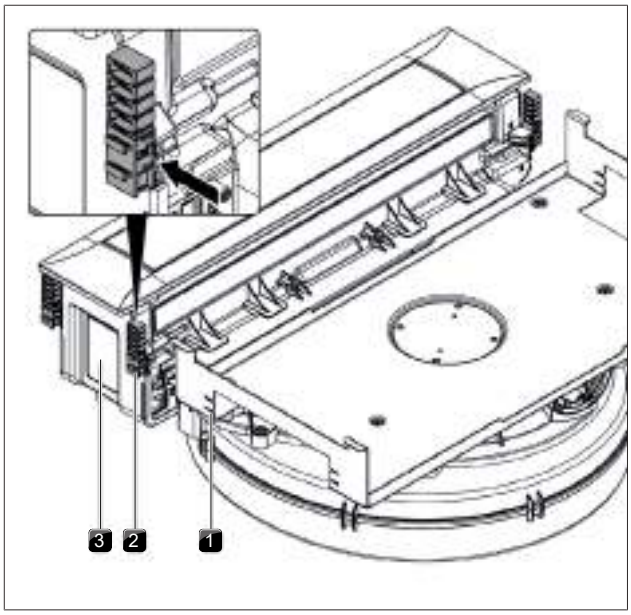

Fig. 4.36 Pushing on the mounting brackets

[1] Alternative position for mounting bracket
[2] Mounting bracket
[3] Cooktop extractor

▶ Use a Torx 20 screwdriver to tighten the mounting brackets slightly from underneath.
▶ Verify that the alignment is correct.

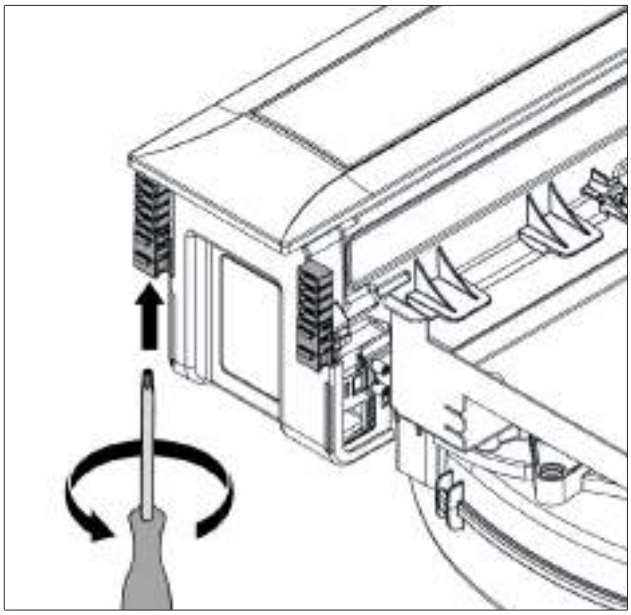

Fig. 4.37 Tightening the mounting clamps

4.9 Installing the duct system

BORA does not assume any liability for the installation of the Ecotube duct system. Fire safety requirements are to be clarified with the local authorities prior to installing the Ecotube duct system. If necessary, suitable shut-off devices must be used to meet the national requirements.

4.9.1 Duct connection dimensions

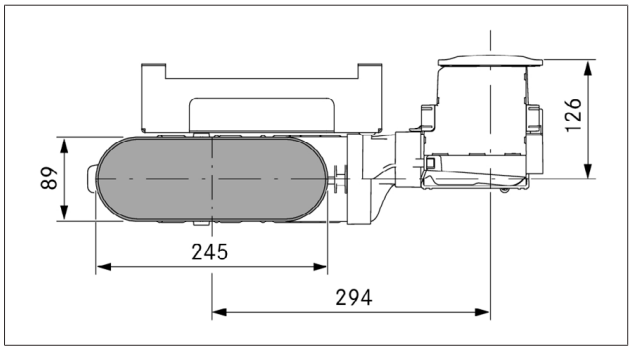

Fig. 4.38 Duct connection dimensions for PKA3/PKA3AB with the curved duct piece

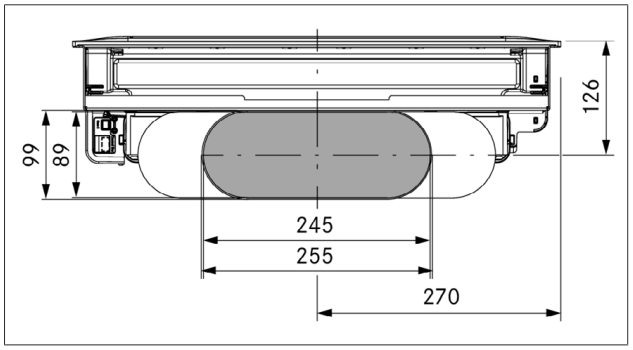

Fig. 4.39 Duct connection dimensions for PKA3/PKA3AB with the curved duct piece

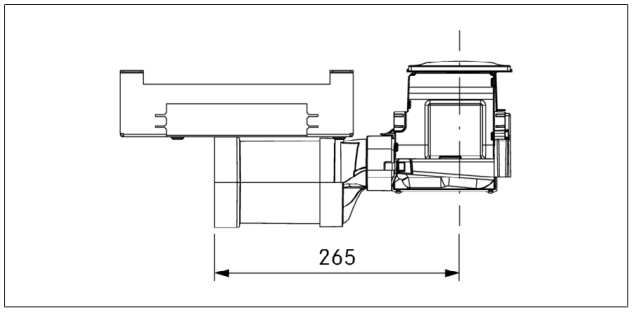

Fig. 4.40 Duct connection dimensions for PKA3/PKA3AB with the straight duct piece

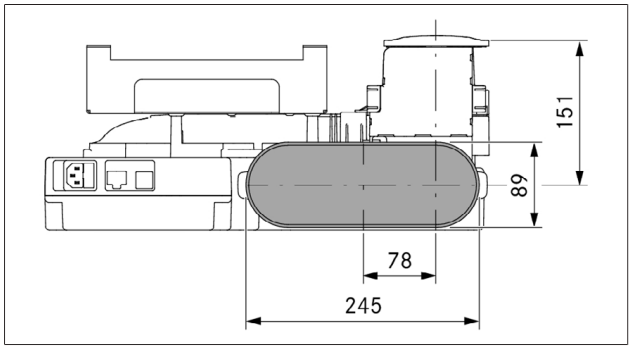

Fig. 4.41 Duct connection dimensions for PKAS3, PKAS3AB

4.9.2 Preparing for installation

- The maximum exhaust air duct length with a fan is 6 m with six 90° bends installed.
- The minimum cross-section of the air ducts must be 176 cm^2, which equates to a round pipe with a diameter of 150 mm or the BORA Ecotube duct system.

▶ Use only BORA Ecotube duct parts.
▶ Do not use flexible or fabric hoses.
▶ The duct system must be fitted to the cooktop extractor free of load and with the power supply switched off.
▶ Adjust the ducting parts to the height of the worktop.
▶ Saw out the necessary cut-outs for the ducting in the back panel of the floor unit.

4.9.3 Connecting the duct system to the appliance

When attaching the seals, ensure that an airtight seal is created with the connecting duct piece when the seals are compressed.

▶ Push the seal onto the outlet nozzle on the appliance. To do this, the seal will need to be stretched slightly.
▶ Push the duct part to be connected with the coupling onto the outlet nozzle with the seal.
▶ Ensure that the seal is not displaced.

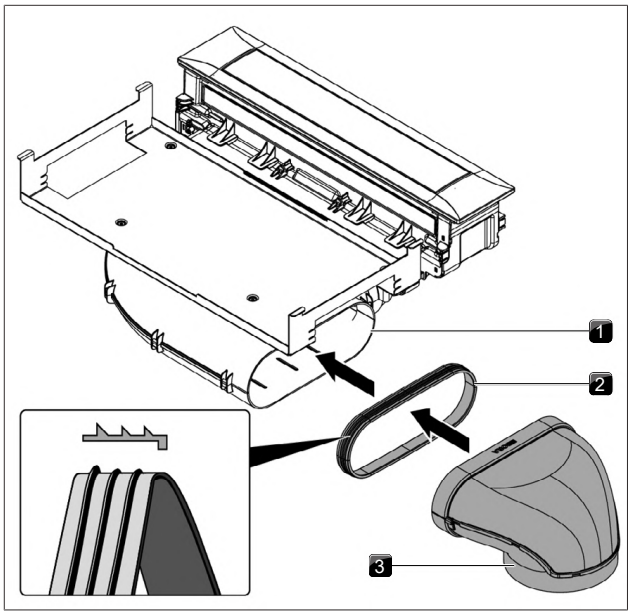

Fig. 4.42 Connecting to the duct system

[1] Exhaust opening
[2] Seal
[3] Duct piece

4.9.4 Standard set-up for PKA3/PKA3AB

The floor unit must not be supported by the plinth fan housing.

▶ Depending on the installation situation, adjust the levelling feet on the floor unit as necessary.
▶ Push the round seal onto the plinth fan inlet nozzle.
▶ Push the shallow seal onto the plinth fan outlet nozzle.
● To do this, the seals will need to be stretched slightly.

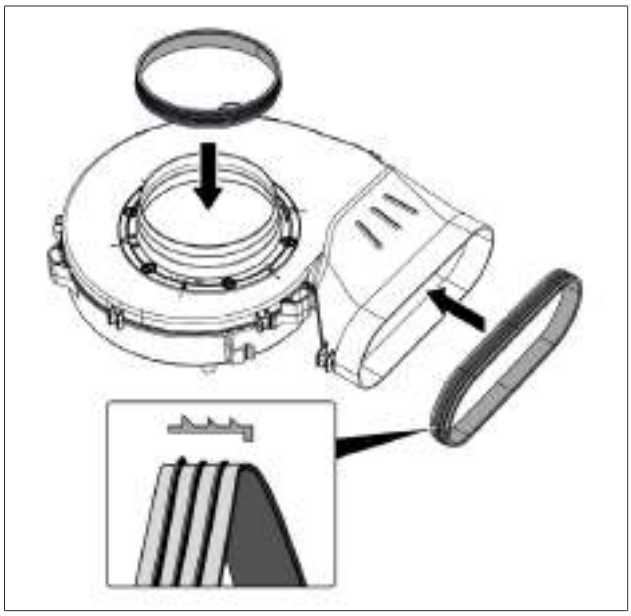

Fig. 4.43 Fitting the seals on the plinth fan

▶ Push the 90° diverter onto the curved duct piece.
▶ Position the plinth fan.
▶ To facilitate positioning, the inlet nozzle on the plinth fan can be removed. To do this, please see the assembly instructions for the Universal plinth fan ULS.
▶ Connect the silencer to the plinth fan.
▶ Connect the silencer to the 90° diverter.
● You can optimally stick the joins between the ducting sections and the plinth fan together with UDB sealing tape.
▶ Position the plinth fan and the control unit in such a way that they are easily accessible and removable for maintenance work.

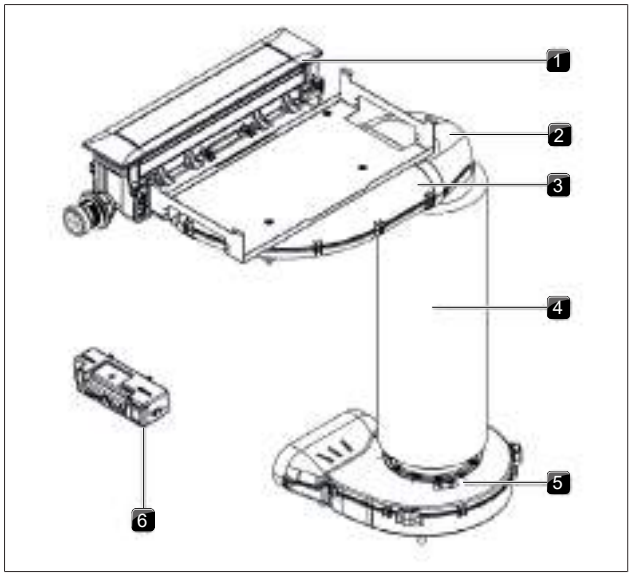

Fig. 4.44 Standard set-up for PKA3/PKA3AB

[1] Cooktop extractor
[2] 90° diverter
[3] Curved duct piece
[4] Silencer
[5] Universal plinth fan
[6] Control unit

4.9.5 Positioning the control unit

The control unit must be placed inside the kitchen unit. Position the control unit inside the kitchen unit in such a way that it cannot be freely accessed by the user (e.g. behind the plinth panel). When positioning the control unit please observe the length of the mains cable (1 m).
Permitted positions inside the kitchen unit:
● loose on a false floor
● loose on the shallow duct
● mounted on the kitchen unit

4.9.6 Installing the additional fan

The maximum exhaust air duct length with a fan is 6 m.

▶ Install an additional fan in the exhaust duct if necessary.
▶ Ensure that there is a clearance of at least 3 m between the fan units.
▶ Use only BORA Universal fans.

4.10 Gas installation

Assembly, installation and commissioning must always occur in line with national laws, regulations and standards. The work must be performed by qualified specialists who know and comply with the additional regulations of the local energy supply companies.

The gas must be connected before the cooktop is installed in the worktop.

4.10.1 Ventilation

This appliance is not connected to a flue gas evacuation device. It must be positioned and connected in accordance with the applicable installation conditions. Suitable ventilation measures must be particularly adhered to.
▶ Always ensure sufficient ventilation during operation (of the appliance).

4.10.2 Gas connection

The gas supply is connected to the appliance using a pre-installed elbow fitting with a 1/2" cylindrical internal thread. If, due to national regulations, a conical connection is required, the cylindrical/conical transition piece (provided) is to be used.

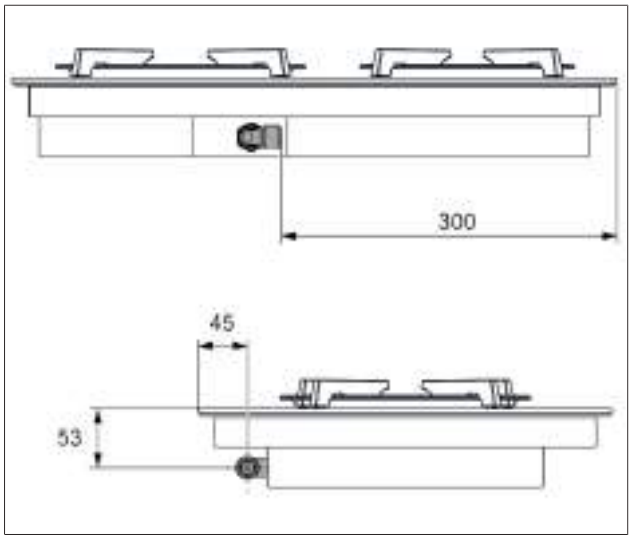

Fig. 4.45 Position of gas connection

4.10.3 Connecting the gas supply

- ▶ Turn off the gas supply.
- ▶ Switch off the main switch/automatic circuit breaker before connecting the cooktop.
- ▶ Secure the main switch/automatic circuit breaker against being switched back on without permission.
- ▶ Make sure the power to the appliance is disconnected.
- ▶ Check the gas type and gas pressure of the gas supply pipe.
- ▶ Ensure that the appliance is equipped with the correct nozzle type in order to guarantee a correct burner flame and safe operation.
- ▶ Remove the protective cap from the elbow fitting.
- ▶ Connect the appliance to the gas supply.
- ▶ When the cooktop has been installed, use suitable testing equipment to check all the connections between the cooktop and the gas supply. There must not be any leaks.
- ▶ Create a leak test record and give this to the user.

4.10.4 Additional installation instructions for Australia and New Zealand (AU/NZ)

Observe the requirements for installing the appliance pursuant to AS/NZS 5601.1: minimum distance from the gas burner head to flammable surfaces.

Installation may only be carried out by authorised staff.

- ▶ Furthermore, the requirements under current regulations and the latest version of AS/NZS 5601.1 are to be observed.
- ▶ Other technical requirements are to be taken into account: AS/NZS 5263.1.1 Gas appliances – domestic gas cooking appliances (AU/NZS).
- ▶ Please check the different scopes of delivery
  - Any connection to a rigid pipe must be made pursuant to AS/NZS 5601.1.
  - Pursuant to AS/NZS 1869 (certified according to AS/NZS 1869) the connection to a gas hose must have a diameter of 10 mm, be class B or D pursuant to AS/NZS 1869 and have a maximum length of 1200 mm pursuant to AS/NZS 5601.1.

Natural gas (NG)

If the cooktop is connected to a natural gas supply (NG), a gas regulator with a test-point adapter must be installed.
The gas regulator is included in the scope of delivery.

- ▶ Attach the gas regulator to the connection on the gas cooktop.
- ▶ Bear in mind the direction of the flow of gas through the gas regulator.

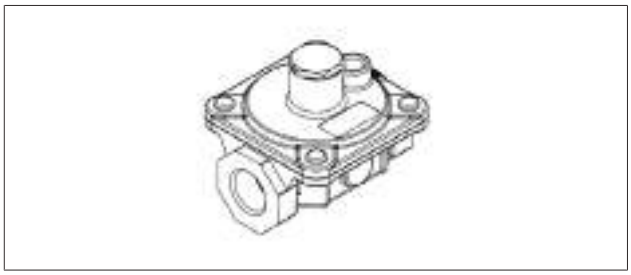

Fig. 4.46 Gas regulator (NG)

Liquified petroleum gas (LPG)

When switching from NG to ULPG, the sticker provided must be affixed

If the cooktop is connected to a liquified petroleum gas supply (LPG), the supply is adjusted at the gas bottle, so only the test-point adapter provided with the appliance needs to be fitted in the gas supply pipe.

- ▶ Attach the test-point adapter to the connection on the gas cooktop.

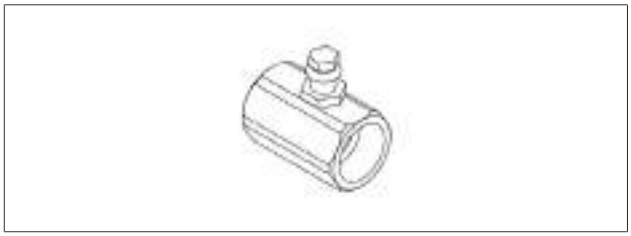

Fig. 4.47 Test-point adapter (LPG)

Test the gas pressure (LPG) as follows:

- ▶ Turn the knob to position 0.
- ▶ Turn off the gas supply.
- ▶ Unscrew the test-point adapter screw completely.
- ▶ Connect your measuring device to the test-point adapter connector.
- ▶ Turn on the gas supply.
- ▶ Set the gas pressure on the gas supply pipe (LPG pressure cylinder) to 2.75 kPa.
- ▶ Light the burner.
- ▶ Check the burner flame.
- ▶ Turn off the gas supply when you have successfully set the pressure.
- ▶ Turn the knob to position 0.
- ▶ Unscrew the measuring device from the test point.
- ▶ Screw the test-point screw back into the test-point adapter.
- ▶ Ensure that the screw is fitted correctly.

4.10.5 Changing the gas type

- ▶ Turn off the gas supply to the gas supply pipe.
- ▶ Switch off the main switch/automatic circuit breaker.
- ▶ Secure the main switch/automatic circuit breaker against being switched back on without permission.
- ▶ Make sure the power to the appliance is disconnected.

Changing the gas burner nozzle in the gas burner

The nozzles regulate the maximum gas throughflow for each burner and gas type/pressure. The gas cooktop is set by default to natural gas G20/20 mbar (pre-assembled). If another type of gas is used, the configuration menu on the cooktop must be adjusted accordingly. Use only stamped and approved nozzles.

Tab. 4.6 Gas cooktop default settings

The stamp on the nozzles corresponds to the values in the nozzle table and can be found either on the top or side of the nozzles.

Gas type/gas pressure mbar	Ø SR burner/normal burner	Ø R burner/high-power burner
G20/20	104	125
G25/20	110	131
G20/13	115	149
G25/25 G25.3/25	104	131
G20/25	100	119
G30/37 G31/37	69	85
G30/50 G30–50 mbar	62	78

Tab. 4.7 Nozzle table

Total nominal connection values for liquid gas:

Gas type	mbar	kW	g/h	m^3/h
G30/G31	50	4.90	364	0.143
G30	29	5.00	364	0.143

Tab. 4.8 Liquid gas nominal connection values

Total nominal connection values for natural gas:

Gas type	mbar	kW	m^3/h
G20	screwdriver	5.00	0.48
G25	25	5.10	0.55
G25.3	25	5.10	0.54
G20	13	5.00	0.48
G25	20	4.80	0.55

Tab. 4.9 Natural gas nominal connection values

Special nozzle table for Australia and New Zealand:

Gas type/gas pressure mbar	Ø SR burner/normal burner	Ø R burner/high-power burner
NG/1.0 kPa (G20/10)	1.22	1.55
ULPG/2.75 kPa (G31/27.5)	0.75	0.92

Tab. 4.10 Nozzle table (Australia and New Zealand)

Total nominal connection value for ULPG/2.75 kPa test-point pressure:	18.6 Mj/h
Cooktop energy consumption AU/NZ – ULPG/2.75 kPa test-point pressure:	
High-power burner	11.2 Mj/h
Normal burner	7.4 Mj/h
Total nominal connection value for NG/1.0 kPa test-point pressure:	19.5 Mj/h
Cooktop energy consumption AU/NZ – NG/1.00 kPa test-point pressure:	
High-power burner	12.0 Mj/h
Normal burner	7.5 Mj/h

▶ Remove the pan support.
▶ Remove the burner cap from the burner head.
▶ Remove the burner head from the gas outlet.

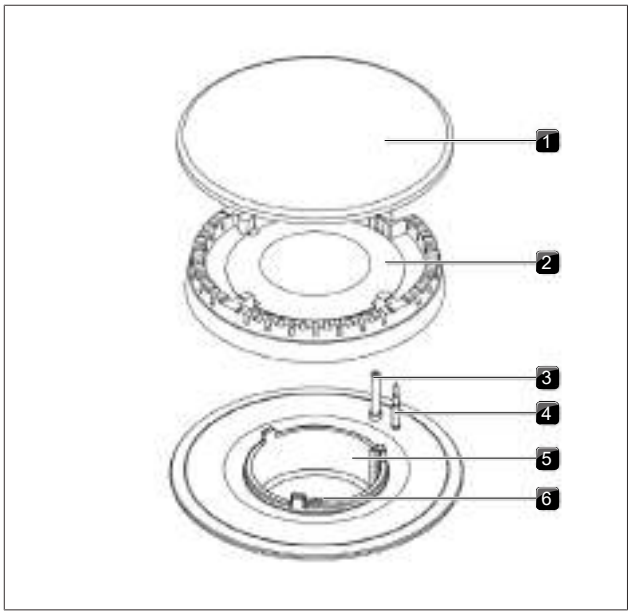

Fig. 4.48 Gas burner structure

[1] Burner cap
[2] Burner head
[3] Electric igniter
[4] Safety thermocouple
[5] Burner housing
[6] Gas burner nozzle

▶ Unscrew the gas burner nozzle from the gas burner
▶ Screw the corresponding nozzle for the gas type to be used into the gas burner.
▶ Put the burner parts back together again.
▶ Position the burner head correctly on the gas outlet.
▶ Ensure that the safety thermocouple and the electric igniter are positioned in the correct opening.
▶ Position the burner cap so that it fits perfectly, sitting straight on the burner head.
● If burner parts are not positioned correctly, the electric igniter will not work.
▶ Place the pan support straight on the gas burner so it fits perfectly.

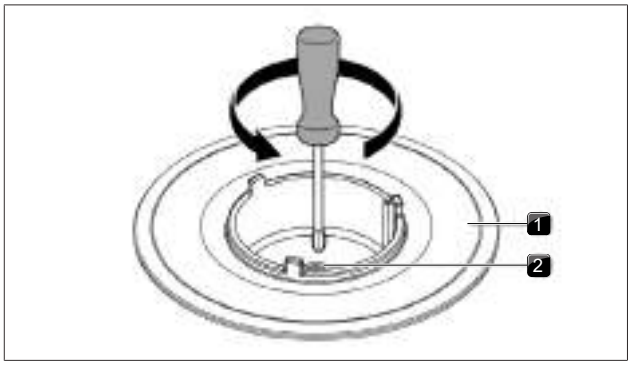

Fig. 4.49 Cooktop burner with gas burner nozzle

[1] Gas burner
[2] Gas burner nozzle

▶ Set the gas type in the configuration menu.

Affixing the nozzle set nameplates
Affix the nozzle set nameplates included in the scope of delivery in the corresponding space over the nozzle set nameplate on the bottom of the cooktop and on the penultimate page of the operating instructions.

Fig. 4.50 Affixing the nozzle set nameplates

4.11 Installing the cooktops

Clearance of one millimetre should be planned between the built-in appliances. A clearance of two millimetres should be planned around the built-in appliances.
The cooktop can also be installed rotated by 180°.

4.11.1 Preparing the cooktop extractor when using the wok cooktop

If a cooktop extractor is right next to a wok cooktop, the plastic bar on the side of the cooktop extractor must be carefully removed.
▶ Carefully remove the plastic bar from the side of the cooktop extractor.
▶ To do this, use a utility knife or similar suitable tool.

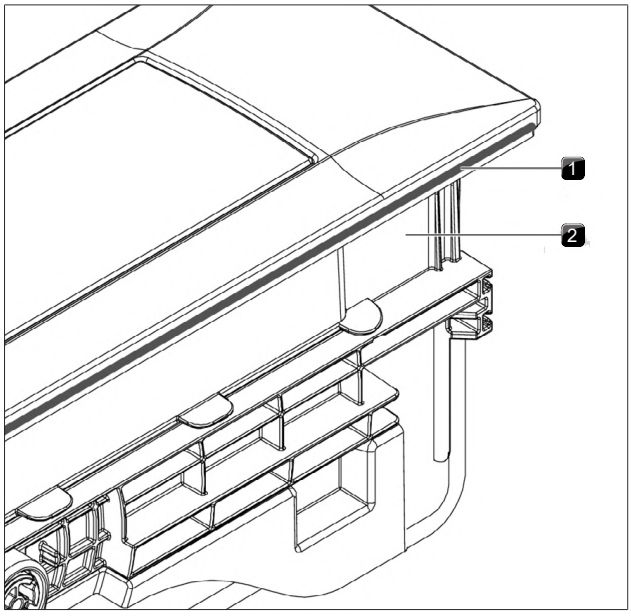

Fig. 4.51 Plastic bar on the side of the cooktop extractor

[1] Plastic bar on the side
[2] Cooktop extractor

4.11.2 Installing the cooktop

When installing cooktops PKFI3/PKFI3R and PKI3, pay attention to the position of the cooktop display (alternatively, the cooktop can be installed rotated by 180°).
▶ Insert the cooktop into the worktop cut-out.
▶ Precisely align the cooktop.
▶ For a normal installation, please note that the ports for the control knobs and the automatic extractor function are at the front.
▶ The connection cables should be guided to the rear. Use the cable holders provided.

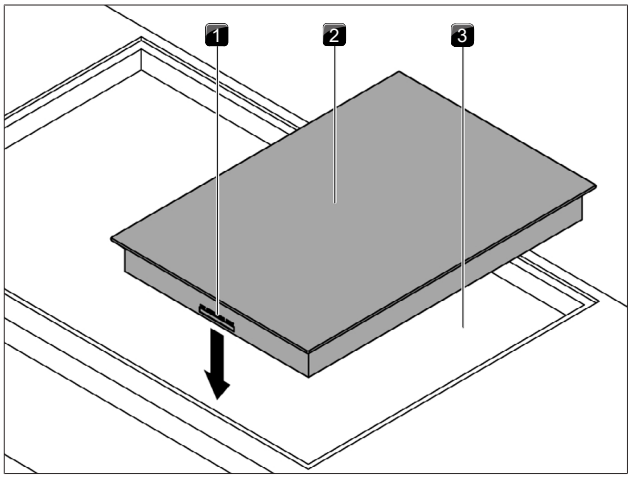

Fig. 4.52 Inserting the cooktop

[1] Control knob port and cooktop extractor interface (front)
[2] Cooktop
[3] Worktop cut-out

▶ If applicable, insert the height adjustment plates.

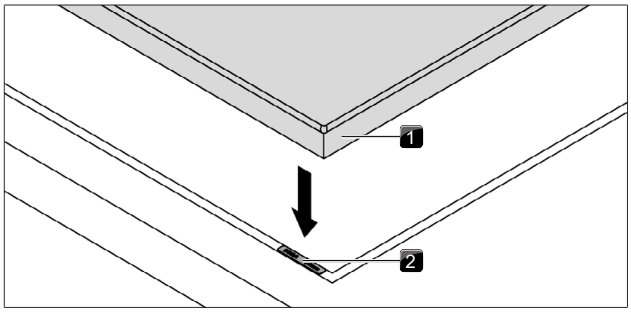

Fig. 4.53 Cooktop and height adjustment plates

[1] Cooktop
[2] Height adjustment plates

▶ Secure the appliance using the mounting brackets.
▶ Screw on the mounting brackets using the washer to a maximum of 2 Nm.
▶ Verify that the alignment is correct.

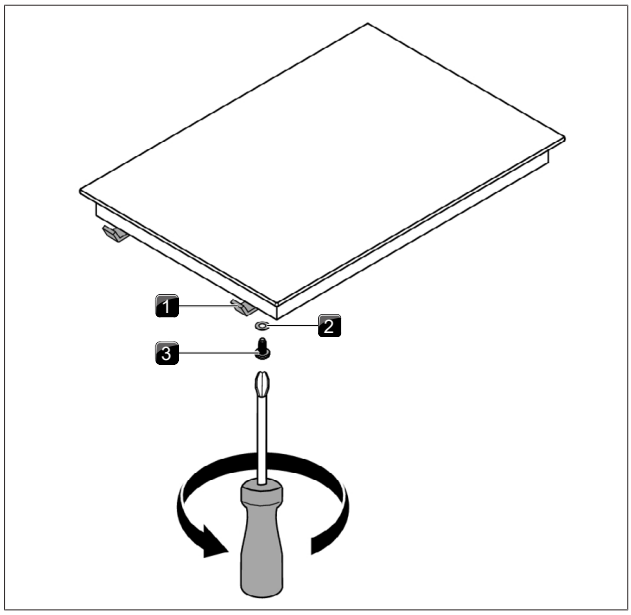

Fig. 4.54 Mounting brackets

[1] Mounting bracket
[2] Washer
[3] Screw

4.11.3 Installing the Tepan stainless steel grill

▶ Insert the Tepan stainless steel grill into the worktop cut-out.
▶ Precisely align the Tepan stainless steel grill.
▶ For a normal installation, please note that the ports for the control knobs and the automatic extractor function are at the rear.

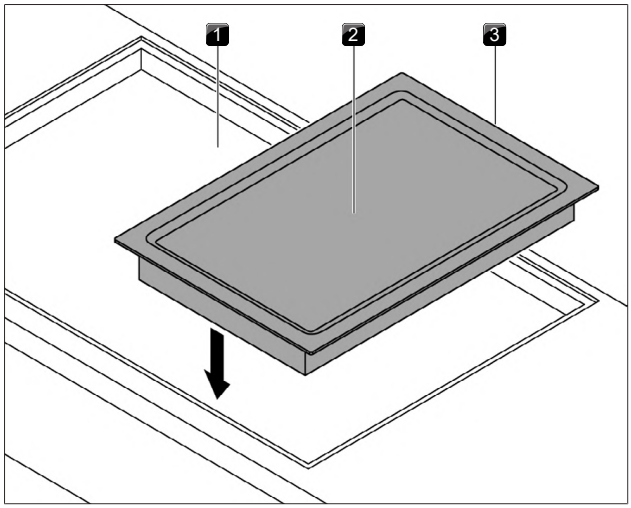

Fig. 4.55 Inserting the Tepan stainless steel grill

[1] Worktop cut-out
[2] Tepan stainless steel grill
[3] Control knob and automatic extractor function ports

▶ If applicable, insert the height adjustment plates.
▶ Secure the appliance using the mounting brackets.
▶ Screw on the mounting brackets using the washer to a maximum of 2 Nm.
▶ Verify that the alignment is correct.

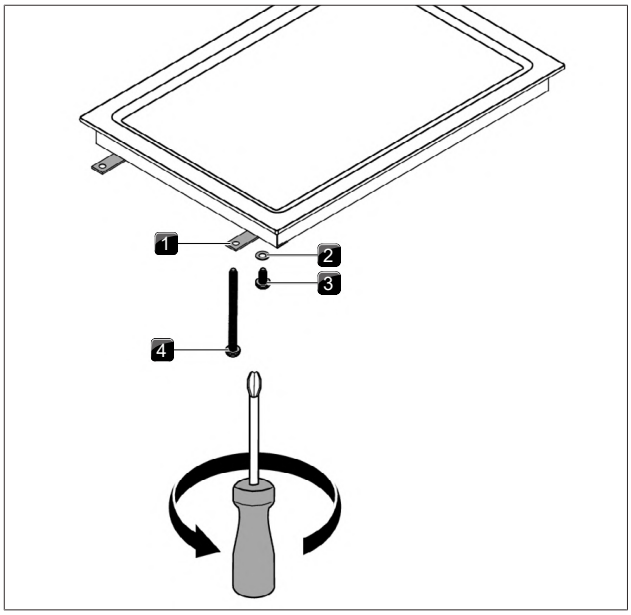

Fig. 4.56 Mounting brackets

[1] Mounting bracket
[2] Washer
[3] Screw
[4] Screw (60 mm)

4.11.4 Cooktop installation rotated by 180°

When installing a cooktop with a cooktop extractor, the configuration cannot be changed to the installation set-up rotated by 180°.

Installation clearances for cooktops PKC3, PKCB3 and PKCH3 when installed rotated by 180°

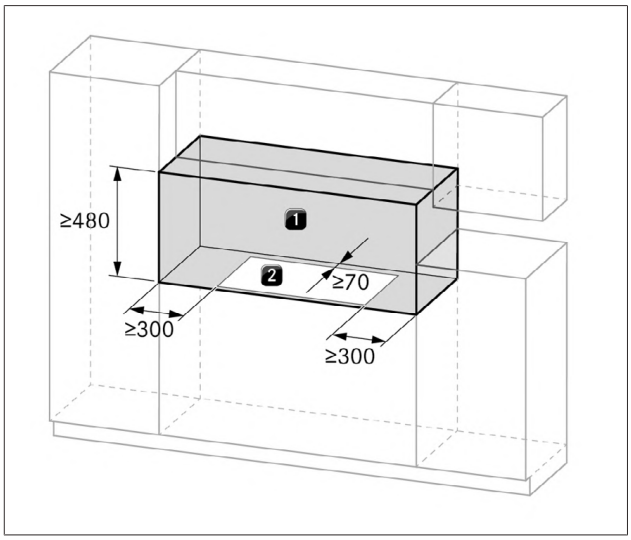

Fig. 4.57 Required clearance

[1] Required clearance
[2] Worktop cut-out

Installation rotated by 180°

▶ For the installation, proceed as described above.
▶ Change the installation direction in the configuration menu (see “Configuration menu” in the operating instructions).
- If installation is rotated by 180°, the ports for the control knobs and the automatic extractor function are at the rear of the cooktops.

Gas cooktop installation rotated by 180°

▶ Rotate the gas elbow fitting 180° so that the supply can be connected to the rear.

Tepan stainless steel grill installation rotated by 180°

- If installation is rotated by 180°, then on the Tepan stainless steel grill PKT3 the ports for the control knobs and the automatic extractor function are at the front.

4.12 Connecting external switch contacts

The electronic unit can contain residual charge. You must therefore be careful not to touch the exposed contacts on the electronic unit.

When using Home In and Home Out, you will require the relevant documents for the external switch devices in order to ensure safe device connection and operation. The following switch contacts can be used:

Contact	Function	Connection
Home In	Cooktop extractor on/off connection for external switch contact (contact closed: cooktop extractor on)	12 V DC 100 mA
Home Out	Electrically isolated contact for controlling external installations depending on the operating status of the cooktop extractor (cooktop extractor on: contact closed)	250 V AC/30 V DC, 5 A maximum

Tab. 4.11 Switch contacts

The Home-In contact can be used for external safety devices (e.g. window contact switches). If the switch is open, the cooktop extractor is off.

4.12.1 Preparing PKAS3/PKAS3AB

So that the top of the appliance is not scratched during installation, it must be placed on a protective base (e.g. cardboard).
▶ Spread out a base to protect the surface.
▶ Turn the cooktop extractor system over and lay it upside down on the base.
▶ Undo the control unit screws on the bottom of the cooktop extractor system.
▶ Remove the housing cover from the housing.
▶ Do not touch the electronic unit.

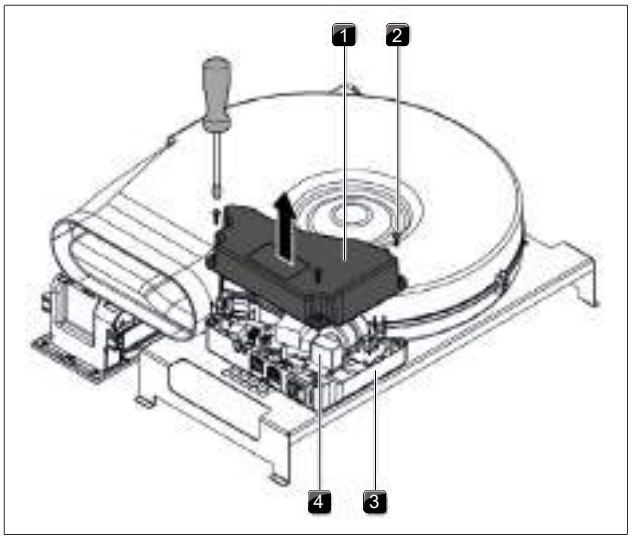

Fig. 4.58 Opening the control unit housing cover

[1] Housing cover
[2] Screw (x 3)
[3] Housing
[4] Electronic unit

4.12.2 Preparing the control unit on PKA3/PKA3AB

▶ Ensure that the control unit is disconnected from the power supply.
▶ Undo the screw on the housing cover.
▶ Carefully release all locks with a slotted screwdriver.
▶ Remove the housing cover from the housing subshell by lifting it up.
▶ Do not touch the electronic unit.

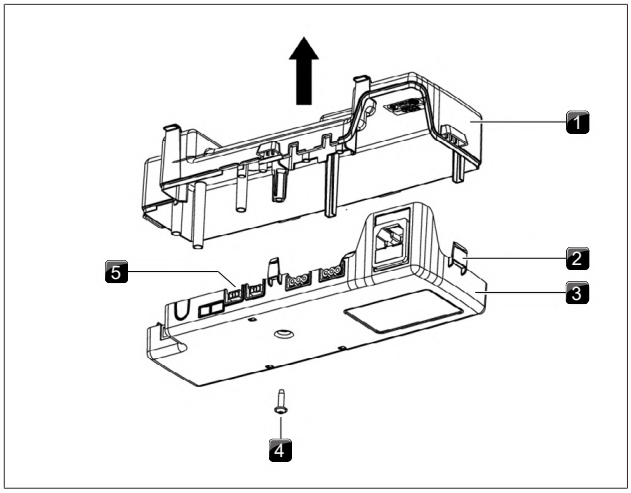

Fig. 4.59 Opening the control unit housing cover

[1] Housing cover
[2] Locks
[3] Housing subshell
[4] Screw
[5] Electronic unit

4.12.3 Preparing connection cables for external switching equipment

Use connection cables of the following types to connect external switch devices.

Contact	Connection cable
Home In	H03VV-F 2 x 0.5mm²
Home Out	H05VV-F 2 x 1 mm²

Tab. 4.12 Connection cable

▶ Prepare the connection cable in accordance with the prescribed stripping lengths.
- The connection cable is only intended for internal use in buildings, private households, kitchens or offices!
- The overall length of the connection cable for external switching equipment must not exceed 10 m!

PKA3/PKA3AB

▶ Please adhere to the maximum stripping length of the individual wires of 9 mm on the stripped wire end.
▶ Please adhere to the maximum stripping length of the outer sheath of 25 mm on the insulated wire.

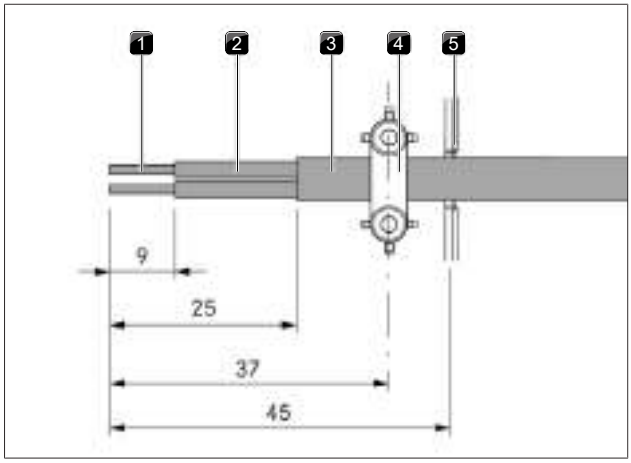

Fig. 4.60 Stripping lengths and installation position of the PKA3/ PKA3AB connection cable

[1] Stripped wire end
[2] Insulated wire
[3] Jacketed cable
[4] Strain relief clamp
[5] Cable feed snap-out element

PKAS3/PKAS3AB

▶ Please adhere to the maximum stripping length of the individual wires of 9 mm on the stripped wire end.
▶ Please adhere to the maximum stripping length of the outer sheath of 21 mm (Home In) and 16.5 mm (Home Out) on the insulated wire.

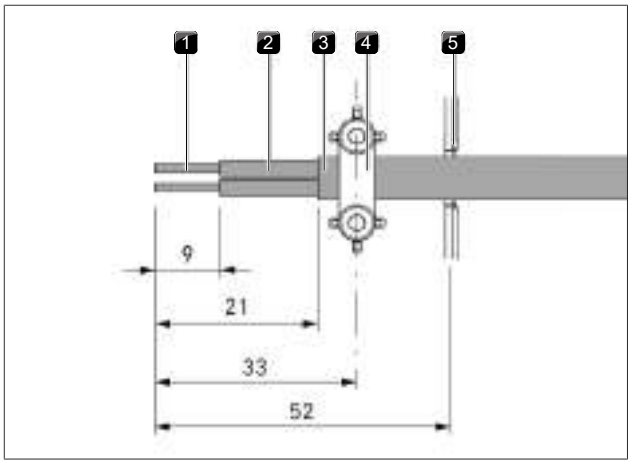

Fig. 4.61 Stripping lengths and installation position of the PKAS3/ PKAS3AB connection cable – Home In

[1] Stripped wire end
[2] Insulated wire
[3] Jacketed cable
[4] Strain relief clamp
[5] Cable feed snap-out element

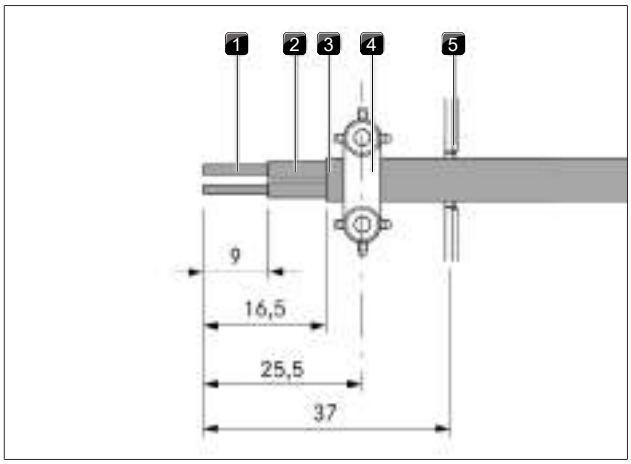

Fig. 4.62 Stripping lengths and installation position of the PKAS3/ PKAS3AB connection cable – Home Out

[1] Stripped wire end
[2] Insulated wire
[3] Jacketed cable
[4] Strain relief clamp
[5] Cable feed snap-out element

4.12.4 Installing the external switch device

Depending on the type of switch device, connect the connection cables to either the Home In or the Home Out connection clamp.
▶ Adhere to the connection diagram when connecting Home In and Home Out.
▶ Connect the cable for the relevant contact to the switch contact clamp in accordance with the connection diagram.
- In order to connect the Home-In interface, the installed bridge must be removed.
- The Home In contact must be bridged if this is not used (bridged on delivery).

- For connections to the Home In connection clamp, no ferrules may be used.

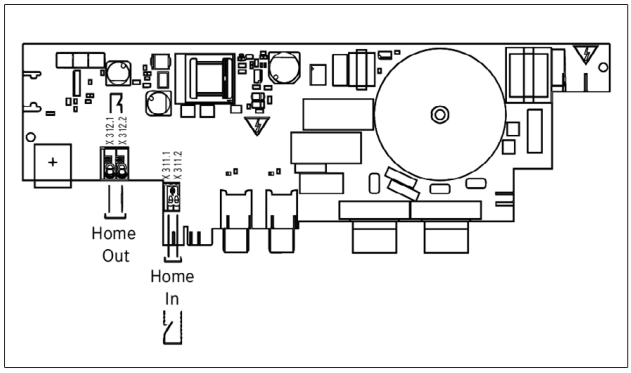

Fig. 4.63 Connection diagram for the external switch contacts PKA3

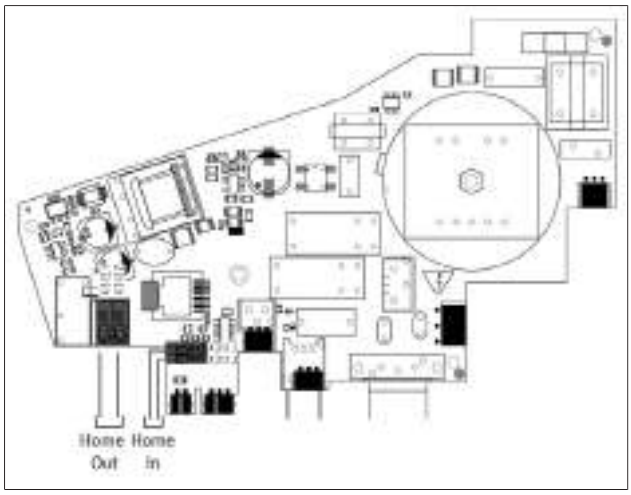

Fig. 4.64 Connection diagram for the external switch contacts

▶ Remove the snap-out element required for the cable feed from the plastic housing of the control unit.

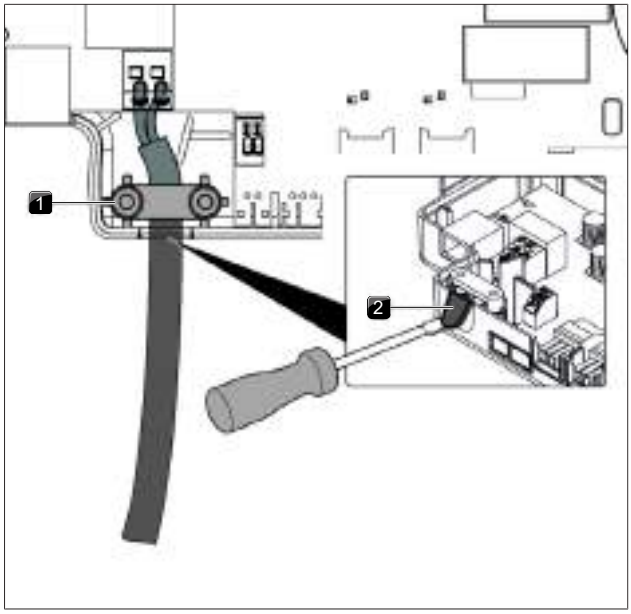

Fig. 4.65 Home-Out contacts with strain relief

[1] Strain relief clamp
[2] Snap-out element for cable feed

▶ Clamp the connection cable in the strain relief clamp provided in accordance with the wire cross section or number of cables used.
▶ Check the correct installation, as well as the firm positioning of the connection cables.
▶ Close and secure the control unit cover.
▶ Screw down the lid with the screw provided (max. 2 Nm).
▶ Make sure that the cable is not damaged or trapped.
▶ If the Home-In interface is connected to PKAS3/PKAS3AB, the two insulated wires of the connection cable must be joined together with a cable tie.

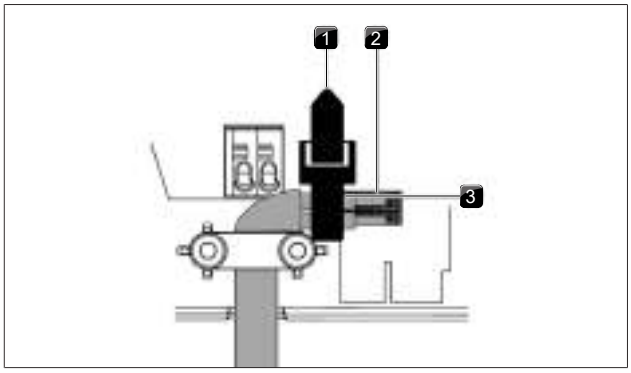

Fig. 4.66 PKAS3 Home-In interface cable tie

[1] Cable tie
[2] Home-In interface PKAS3/PKAS3AB
[3] Insulated wire

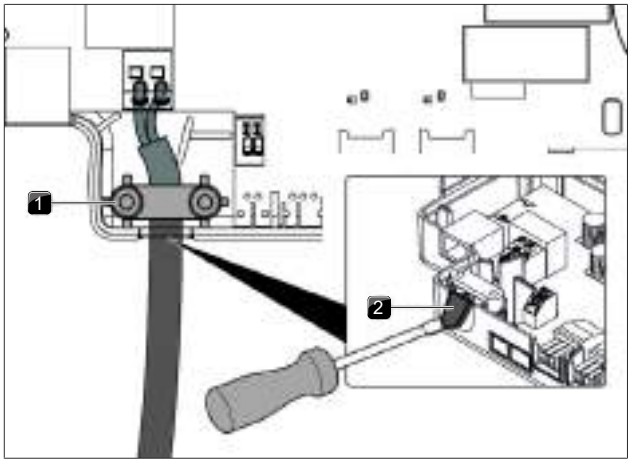

Fig. 4.67 Home-Out contacts with strain relief

[1] Strain relief clamp
[2] Snap-out element for cable feed

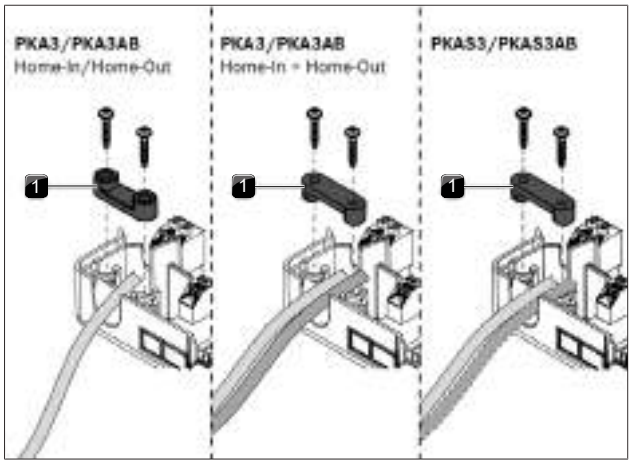

Fig. 4.68 Fitting the strain relief clamp

[1] Strain relief clamp

4.13 Establishing communication and power connection

- The plug for the mains supply cable must be accessible following installation.
- If the mains supply cable has been damaged this must be replaced.
- The appliance components are linked by the ribbon cable provided.

4.13.1 Connecting the control knobs

Control knobs must only be connected to the ports provided on the appliance.

▶ Connect the control knobs to the appliances.

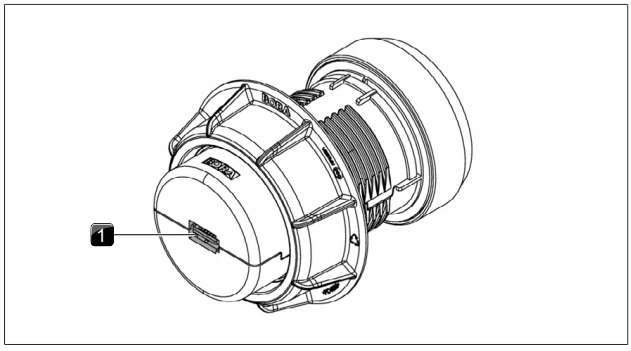

Fig. 4.69 Back of control knob with port

[1] Port on the back of the control knob

Connecting the control knobs to the cooktop extractor

▶ Connect the port on the back of the control knob to the port provided on the side of the cooktop extractor.

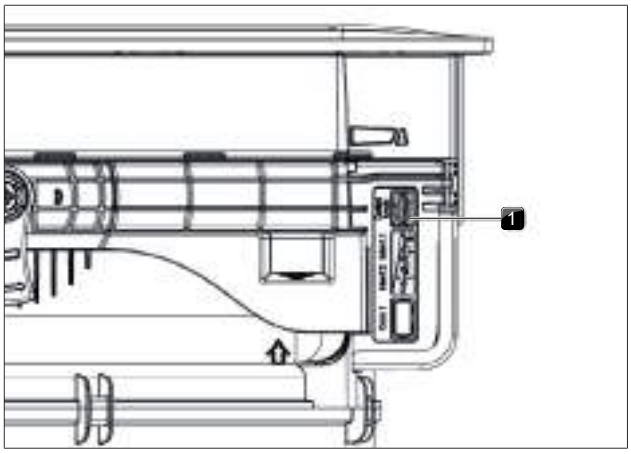

Fig. 4.70 Ports on the side of the cooktop extractor

[1] Control knob port

Connecting the control knobs to the cooktop

In the normal set-up the ports are on the front of the cooktops. According to the default settings, the left control knob operates the front cooking zone (zone 1) and the right control knob operates the rear cooking zone (zone 2).

▶ Connect the port on the back of the left control knob to the “zone 2” port on the cooktop.

▶ Connect the port on the back of the right control knob to the “zone 1” port on the cooktop.

▶ Using the configuration menu, set the correct allocation of the cooking zones in the control knob display (see “Configuration menu” in the operating instructions).

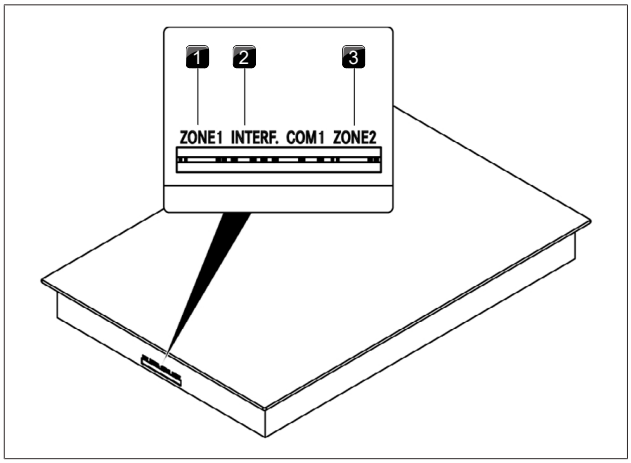

Fig. 4.71 Ports on the cooktop

[1] Front cooking zone control knob port (zone 1)
[2] Extractor electronics interface port
[3] Rear cooking zone control knob port (zone 2)

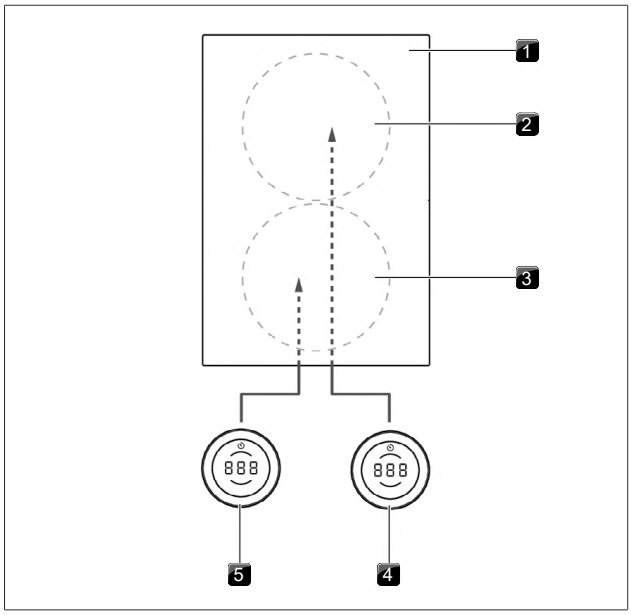

Fig. 4.72 Standard connection of appliances that connect at the front

[1] Cooktop
[2] Rear cooking zone (zone 1)
[3] Front cooking zone (zone 2)
[4] Rear cooking zone control knob (zone 1)
[5] Front cooking zone control knob (zone 2)

Special instructions for the wok cooktop PKIW3

As the wok cooktop PKIW3 only has one cooking zone, in the case of a connection with 2 control knobs it does not matter how the connections are arranged (see the operating instructions).
If the wok cooktop PKIW3 is installed with 2 control knobs, it can be operated with either the left or the right control knob.
Connecting the cooking zone in the case of 1 control knob

▶ Solely connect the port on the back of the control knob to the zone 1 port on the cooktop.

Connecting the cooking zone in the case of 2 control knobs

▶ Connect the ports on the back of the control knob to the ports on the cooktop (zone 1 or zone 2).

4.13.2 Ports on cooktop extractor system PKAS3

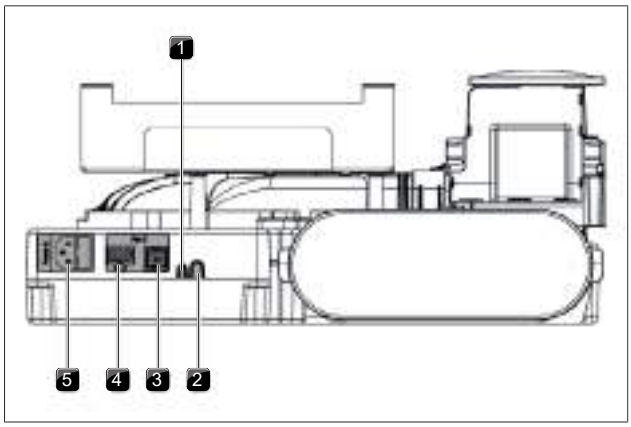

Fig. 4.79 Rear ports on PKAS3

[1] Home In
[2] Home In
[3] Additional fan control line
[4] Additional fan power supply cable
[5] Power supply cable with microfuse

Connecting an additional fan

▶ Connect the additional fan control line to the port provided on the back of the appliance.
▶ Connect the additional fan power supply cable to the port provided on the back of the appliance.
▶ Check all the plug connections to ensure that they are secure.

4.13.3 Connecting cooktop extractor PKA3

Connecting the control unit and fan to the cooktop extractor

▶ Using the CAT 5e communication cable (included in the scope of delivery) connect the port on the side of the cooktop extractor to the port on the control unit.
▶ Connect the plinth fan control line to the control unit.
▶ Connect the plinth fan power supply cable to the control unit.

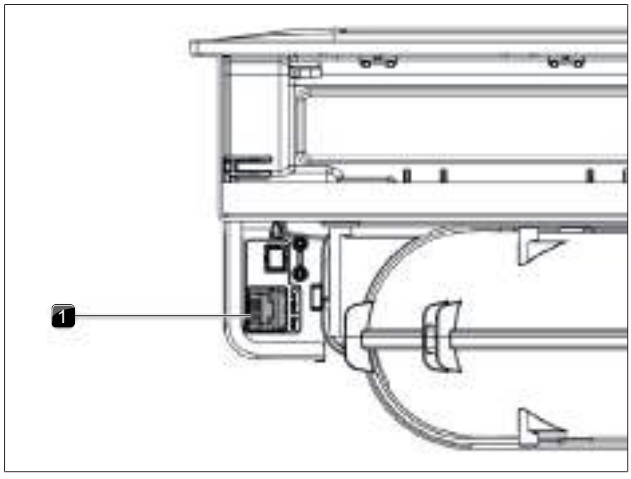

Fig. 4.80 Side port for the control unit on cooktop extractor PKA3

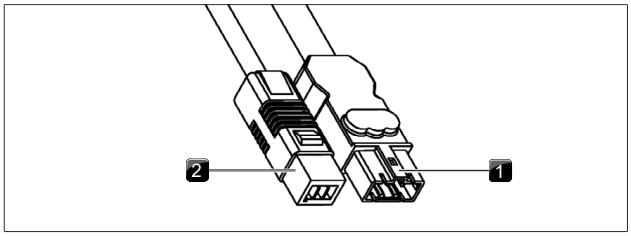

Fig. 4.82 Plinth fan connection plugs

[1] Fan mains cable connection plug
[2] Fan control cable connection plug

Removing the power supply cable

To remove the power supply cable from the control unit you need a small slotted screwdriver.

▶ Disconnect the control unit power supply cable from the power supply.
▶ Make sure that there is no power to the appliance.
▶ Use the slotted screwdriver to undo the lock on the fan power supply cable plug.
▶ To do this, insert the slotted screwdriver into the gap in the socket.
▶ Press the lock down gently.
▶ Use the slotted screwdriver to gently lever the power supply cable plug out of the control unit socket.
▶ Now disconnect the power supply cable from the socket.
▶ Check the plug and the socket for damage.
▶ Do not use damaged components.
▶ Contact your specialist BORA retailer to replace any damaged components.

Connecting an additional fan

▶ Connect the fan control line to the control unit.
▶ Connect the fan power supply cable to the control unit.
▶ Check all the plug connections to ensure that they are secure

4.13.4 Establishing contact between the cooktop extractor and cooktops

The full range of functions on the appliances will only be available if the cooktop extractor and cooktops are connected correctly.

▶ Using the communication ports provided, connect the cooktop extractor to the cooktop or cooktops.
▶ Only use the cables supplied in the scope of delivery.

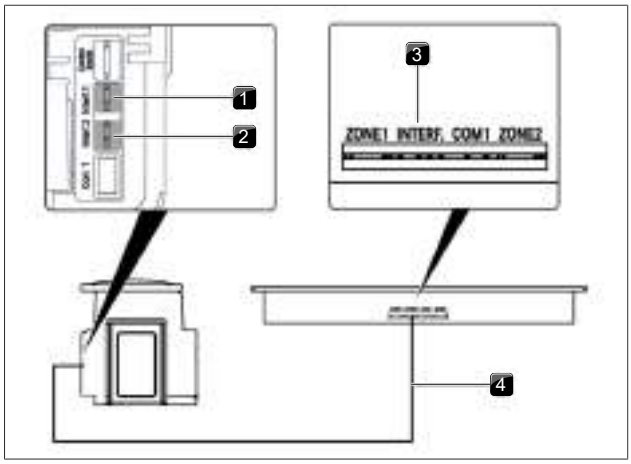

Fig. 4.83 Communication between the cooktop extractor and cooktops

[1] Cooktop extractor communication cable port for left cooktop
[2] Cooktop extractor communication cable port for right cooktop
[3] Cooktop communication cable port
[4] Cooktop-to-cooktop-extractor communication cable

4.13.5 Connecting the power supply

Assembly, installation and commissioning must always occur in line with national laws, regulations and standards. The work must be performed by qualified specialists who know and comply with the additional regulations of the local energy supply companies.

Make sure that technical equipment is provided to enable all of the appliance's poles to be disconnected from the mains with a contact opening width of at least 3 mm (circuit breaker and automatic circuit breakers, fuses, contactor).

Special information for the Tepan stainless steel grill

The Tepan stainless steel grill is intended to be operated on a supply network with a maximum impedance Zmax at the transfer point (mains connection) of 0.0595 ohms . The user is to ensure that the appliance is only operated on a mains supply network which meets this requirement. If necessary, ask the local energy supply company about the system impedance.

Connecting the cooktop extractor to the power supply

- ▶ Connect the extractor system (PKAS3) power supply cable and the control unit (PKA3) power supply cable respectively to the power supply.
- ▶ Put the cooktop extractor into operation (see the operating instructions).
- ▶ Check that all the functions are working correctly.

Connecting the cooktop to the power supply

The power supply cable to be used (already pre-installed) must comply with certain appliance-specific requirements.

A damaged power supply cable must be replaced by a suitable power supply cable. This may only be done by an authorised member of the After Sales Service team.

Power supply cable specifications and single-phase connection diagram for PKFI3, PFKI3R, PKI3, PKIW3, PKG3

Connection	Fuse protection	Wire cross section	Power supply cable
Single-phase connection	1 × 16 A	1.5 mm^2	Type H05VVH2-F

Connection	Fuse protection	Wire cross section	Power supply cable
1-phase connection	1 x 25 A	2.5 mm^2	Type H05V2V2-F
2-phase connection	2 x 16 A	2.5 mm^2	Type H05V2V2-F

Tab. 4.14 Fuse protection and minimum cross-section

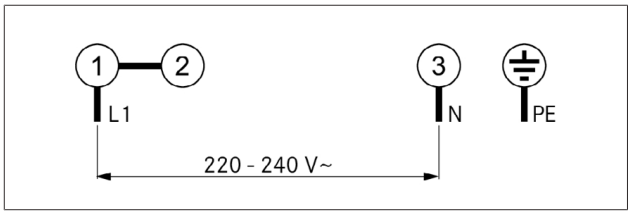

Fig. 4.87 1-phase connection diagram

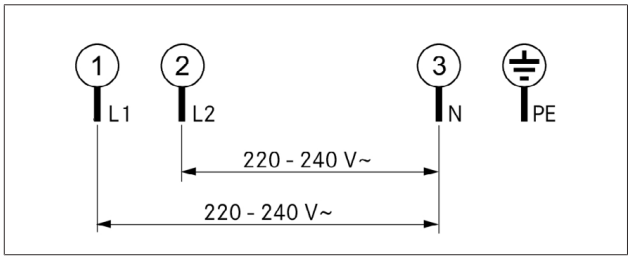

Fig. 4.88 2-phase connection diagram

Connecting the cooktop to the mains

- ▶ Switch off the main switch/automatic circuit breaker before connecting the cooktop.
- ▶ Secure the main switch/automatic circuit breaker against being switched back on without permission.
- ▶ Make sure the power to the appliance is disconnected.
- ▶ Only connect the cooktop using a permanent connection to a power supply cable.
- ▶ Check that installation has been carried out correctly.
- ▶ Switch on the main switch/automatic circuit breaker.
- ▶ Put the cooktop into operation (see the operating instructions).
- ▶ Check that all the functions are working correctly.

4.14 Basic configuration

When installation is complete, you must carry out the basic settings (these settings can be changed at any time later on). You can see precise instructions on the basic configuration and all necessary information in the operating instructions.

4.14.1 Gas configuration

The burner nozzles, gas type and pressure may only be changed by a certified engineer or BORA service technician. They also assume responsibility for the proper gas installation and commissioning.

Gas characteristic curve A must not be used in the case of liquid gas (G30/31).

It is important that the gas type, gas pressure and characteristic curve are set correctly to ensure safe, failure-free operation of the gas cooktop.

You can see detailed information on the configuration menu in the operating instructions.

4.15 Initial operation

- ▶ Ensure that all appliances are connected correctly and connected to the power supply (fused) prior to initial operation.

- Exception: during initial operation, the kitchen fitter may use a temporary power supply for the control unit in order to configure the appliance (e.g. using the site power supply during the building phase).
- The settings made are saved and will not be affected when the system is disconnected from the mains.
- The final mains connection to the appliances may only be set up by certified specialists.

▶ Carry out a thorough function test on all appliances.
▶ In the event of error messages, see the “Troubleshooting” chapter.

4.15.1 Using the gas cooktop for the first time

Initial operation is possible when the gas cooktop has been fully installed and configured.

Function test on the gas cooktop

▶ Switch the cooking zone on.

The electronic gas regulator will calibrate itself (humming noises) and then the gas flame will automatically ignite in the selected cooking zone. The gas flame will burn steadily and evenly.

Using the gas cooktop together with the cooktop extractor for the first time

▶ Switch the cooktop extractor to the maximum power level.
▶ Switch all cooking zones to the minimum power level.

The electronic gas regulator will calibrate itself (humming noises) and then the gas flame will automatically ignite in the selected cooking zone. The gas flame will burn steadily and evenly (no reignition). The gas flame will be slightly affected by the cooktop extractor (airflow) – this is normal.

▶ Carry out a thorough function test on all appliances.
▶ In the event of error messages, see the “Troubleshooting” chapter.

4.16 Sealing the appliances

▶ Once all of the installation work and initial operation is complete, seal the appliances all the way round (also between the cooktop extractor and cooktop) with black, heat-resistant silicone sealant.
▶ Make sure that no silicone sealant gets under the cooktop.

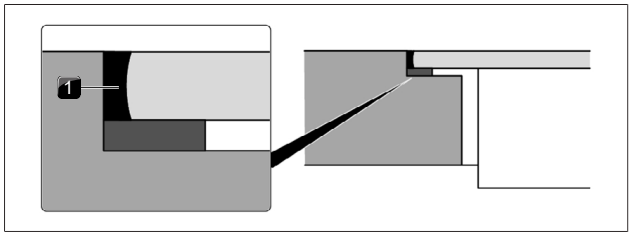

Fig. 4.89 Silicone sealant for flush installation

[1] Black, heat-resistant silicone sealant

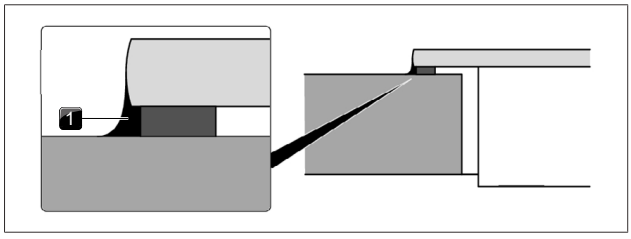

Fig. 4.90 Silicone sealant for surface mounting

[1] Black, heat-resistant silicone sealant

4.17 Handover to user

Once installation is complete:

▶ Explain the main functions to the user.
▶ Explain all safety-related aspects of operation and handling to the user.
▶ Provide the user with the accessories and operating and installation instructions, which are to be kept in a safe place.
▶ Affix the identification plates provided to the penultimate page in the operating instructions.

If a gas cooktop is installed:

▶ also affix the nozzle set identification plate to the penultimate page of the gas cooktop operating instructions.

5 Decommissioning, disassembly and disposal

▶ Observe all safety and warning information (see "2 Safety").
▶ Please observe the documents and instructions provided.

5.1 Decommissioning

Decommissioning refers to ultimate decommissioning and disassembly. Following decommissioning, the appliance can either be installed in another unit, sold on privately or disposed of.

The electricity and gas connections may only be disconnected and cut off by certified specialists.

▶ Switch the appliance off before decommissioning (see operating instructions)
▶ Disconnect the appliance from the power supply.
▶ Disconnect the appliance from the gas supply.

5.2 Disassembly

To be removed, the appliance must be accessible for disassembly and disconnected from the power supply.
▶ In the case of gas appliances, it must be ensured that the gas is disconnected.
▶ Remove the appliance fastenings.
▶ Remove the silicone seals.
▶ Disconnect the appliance from the exhaust duct.
▶ Lift the appliance up and out through the top of the worktop.
▶ Remove any other accessories.
▶ Dispose of the old appliance and any soiled accessories as described under “Environmentally-friendly disposal”.

5.3 Environmentally-friendly disposal

5.3.1 Disposal of transport packaging

The packaging protects the appliance from damage during transport. The packaging materials have been selected taking into account the environment and their disposal and are therefore recyclable.

Recycling the packaging saves raw materials and reduces waste. Your specialist retailer will take the packaging back.
▶ Give the packaging to your specialist retailer
or
▶ Dispose of the packaging correctly observing regional regulations.

5.3.2 Disposal of accessories

Dispose of unnecessary or used accessories (activated charcoal filters, etc.) accordingly taking into account the regional regulations.

5.3.3 Disposal of the old appliance

Electrical appliances with this mark must not be disposed of in the household waste at the end of their service life. They must be disposed of at a collection point for the recycling of electrical or electronic appliances. Information on this can be obtained from the city or local councils.

Waste electrical and electronic appliances often still contain valuable materials. However, they also contain harmful substances that were necessary to make them work and ensure their safety. If placed in the household waste or handled incorrectly, they may harm human health and damage the environment.
▶ Never dispose of your old appliance in the household waste.
▶ Take the appliance to a regional collection point for the return and further processing of electrical and electronic components and other materials.
